

A L^AT_EX package for preparing manuscripts for submissions to the OA journal ‘Enterprise Modelling and Information Systems Architectures – An International Journal’ (EMISA)

Stefan Strecker (stefan.strecker@fernuni-hagen.de)
Martin Sievers (martin.sievers@schoenerpublizieren.de)

31st January 2016

1 Introduction

Enterprise Modelling and Information Systems Architectures – An International Journal (EMISA) is a publisher-independent, peer-reviewed open access journal (<https://emisa-journal.org>). EMISA is published by the German Informatics Society (GI) and is a publication of its Special Interest Group (SIG) on Modelling Business Information Systems (SIG MoBIS) and its SIG on Design Methods for Information Systems (SIG EMISA). SIG MoBIS has sponsored the development of the EMISA L^AT_EX package currently maintained by Stefan Strecker (stefan.strecker@fernuni-hagen.de) and Martin Sievers (martin.sievers@schoenerpublizieren.de).

The EMISA L^AT_EX package is provided for preparing manuscripts for submission to EMISA, and for preparing accepted submissions for publication as well as for typesetting the final document by the editorial office. Articles in EMISA are published online at <https://emisa-journal.org> (in the Portable Document Format or PDF format). The EMISA editorial office is run (alongside many other tasks and projects) by the two Editors-in-Chief assisted by doctoral students. Editorial work at EMISA is best described as a volunteer effort for the scientific community. You can assist us by preparing your manuscript following the instructions and style guidelines described in this document: Your work will be published quicker with less (typographical) glitches and will have a professional appearance.

2 Installation

The EMISA L^AT_EX package consists of the document class `emisa`, the biblatex bibliography style `emisa.bbx` and the biblatex citation style `emisa.cbx`.

The package also includes a quick-start template for authors `emisa-author-template.tex` and the present instructions `emisa.pdf`.

The package is available from the COMPREHENSIVE T_EX ARCHIVE NETWORK (CTAN, <https://ctan.org>) and should be available for installation through the respective T_EX distribution's package installer (e. g. T_EX Live's T_EX Live Utility). This type of installation is recommended in order to always get the latest version automatically. If you prefer a manual installation, please run `pdflatex emisa.dtx` twice, and copy the resulting files to the same directory (folder) in which the source files for the manuscript will be maintained.

3 Instructions and guidelines

This document provides instructions and style guidelines for authors. Follow the instructions and guidelines in the present document to set up your files, to type in your text, to format figures, tables, source code listings and algorithms, and to obtain a consistent visual appearance in accordance with the journal's style specifications. Before submitting your manuscript online to the journal's online submission system at <http://emisa-journal.org>, use these instructions and guidelines as a checklist. Note that these instructions are *not* intended as a general introduction to L^AT_EX2e and corresponding tools (see, for example, <http://mirror.ctan.org/info/lshort/english/> for 'The Not So Short Introduction to L^AT_EX2e—Or L^AT_EX2e in 157 minutes').

4 Preliminary remarks

The EMISA document class is derived from the standard L^AT_EX article class, and produces a customised two-column layout with bibliographic information about the manuscript in a multi-line page headline (including the name of the journal, volume and issue number, date of publication, short title as well as author names) on A4-sized paper.

The EMISA class builds on a number of standard L^AT_EX packages available in distributions such as T_EX Live and MikT_EX. It is highly recommended to install the *full* set of packages to make the required packages available to the EMISA package. Alternatively, missing packages may be installed on-the-fly or via the distributions package manager. The list of required packages for using the EMISA package is rather comprehensive (see `emisa.cls`), but the implementation has taken care to use only packages commonly included in the widely used T_EX distributions T_EX Live and MikT_EX. Among the required packages are `geometry`, `newtxtext`, `newtxmath`, `newtxtt`, `ntheorem`, `amsthm`, `booktabs`, `tabularx` (see `emisa.cls` for a comprehensive overview).

The production process at the EMISA editorial office is based entirely on L^AT_EX, and runs `pdfLATEX` and `biber` to produce the final proof and publication-ready PDF of an article.

The `biblatex` package is used to typeset citations and references in conjunction with the `biber` tool. Make sure to use `biber` rather than `bibtex` to process your bibliography data base file(s).

The production tool chain at the editorial office requires that all text files of an article are provided in UTF-8 *UTF-8 file encoding*.

5 Class Options

- `british, UKenglish` British English is the language of choice for publishing in EMISA. The class option `british` is loaded by default to obtain the correct hyphenation for British English (as provided by the `babel` package). The class option *may be* used with the EMISA class to exemplify the use of British English. Example: `\documentclass[british]{emisa}`. This is the standard option. Note that the `\csquotes` package is loaded with settings to produce proper quotation marks in British English (see below).
- `american, USenglish` If you want to use American English instead, you can use the option `american` or `USenglish`. The hyphenation patterns and quotation marks will be changed accordingly.
- `referee, review` By default, a final version of the manuscript is typeset for online publication including the names and affiliations of authors. For reviewing purposes, the names and affiliations of the authors are omitted using the document option `referee` or `review` to allow for the anonymous (i. e. double blind) peer-review process of EMISA. Example: `\documentclass[referee]{emisa}`. Make sure to use the document option `referee` or `review` before typesetting the final PDF intended for submission to the journal.

6 Author information

- `\author` Each author is added using the macro `\author{\langle author name \rangle}` followed by the corresponding address
- `\address` `\address{\langle author's address (line 1) \rangle \dots (line 2) \rangle \dots }`. If you have multiple authors with the same address, please use `\address{\langle author's address \rangle}` only for the first one and `\address[\langle letter of address \rangle]{\langle \rangle}` for all others. See *emisa-author-template.tex* for details.
- `\author*` There always has to be declared exactly one author as the corresponding author. This is indicated by using the starred version of the `\author` command: `\author*{\langle author's name \rangle}{\langle email address \rangle}`.

7 Title, subtitle, abstract, and keywords

- `\title` The mandatory title and optional subtitle of a manuscript are typeset using `\title{\langle title \rangle}` and
- `\subtitle` `\subtitle{\langle subtitle \rangle}`. Note that the subtitle is indented. The abstract of the manuscript is typeset
- `\abstract` using `\abstract{\langle abstract \rangle}`. Each manuscript should provide an abstract of about 200–400 words.
- `\keywords` Keywords describing the manuscript are typeset using `\keywords{\langle keywords \rangle}` and are concatenated using the `\and` command. For example, `\keywords{keyword1 \and keyword2}`. At least three keywords should be provided.

8 Additional information on the first (title) page

- `\acknowledgements` Acknowledgements, for example, of collaborators, funding agencies etc. may be added using `\acknowledgements{\langle acknowledgements \rangle}`. The acknowledgements are typeset in a footnote on the first page below the corresponding author's email address.
- `\authornote` Additional information for reviewers and readers may be added in a footnote on the titlepage using

`\authornote{<author note>}`. This is typically used for stating earlier publications (e. g. in conference proceedings) on which the present manuscript is based.

9 Style guidelines for regular text

- ▷ Manuscripts should *not* make use of outdated L^AT_EX commands such as `\em`, but rather use the L^AT_EX2_ε commands (e. g. `\emph`, `\texttt`).
- ▷ Do *not* make use of bold face (`\textbf`). Use `\emph` instead to typeset an important word in italics!
- ▷ Always use the tilde `~` to connect before `\ref{<label>}`, e. g., `Sec.~\ref{label}` rather than the problematic: `Sec. \ref{label}`.
- ▷ Do *not* write abbreviations such as e. g. but use the macros provided by the EMISA class (see below). Add punctuation when necessary, for example, write `, \ie`, to achieve the correct punctuation for ‘i.e.’ (i. e.) rather than `, i. e.`, which introduces two problems: A missing spacing after the first full stop and a wrong spacing after the second full stop.
- ▷ Follow the journal’s style specification with respect to predefined text styles:
 - Use `SMALLCAPS` for names of open-source projects, products and companies etc., e. g., `\textsc{eclipse}` to produce ECLIPSE. *Pay attention to lower case spelling.*
- `\meta` ◦ Use non-proportional font for language concepts, meta types, meta classes etc., i. e., `\texttt{AbstractGoalType}` to produce AbstractGoalType, or use the predefined macro `\meta{<metatype>}`, e. g., `\meta{AbstractGoalType}`.
- `\type` ◦ Use the sans-serif font face for type-level concepts etc., e. g., `\textsf{Goal}` to produce Goal when referring to a Goal type, or use the predefined macro `\type{<type>}`, e. g., `\type{Goal}`.

10 Abbreviations and initialisms

- `\eg` To achieve consistent typesetting of common abbreviations, macros are predefined by the EMISA class.
- `\ie` These macros should *consistently* being used instead of writing the plain version. For example use `\eg`
- `\cf` rather than e. g.. The macros take care of spacing within and after the abbreviations.
- `\etal`
 - ▷ `\eg` for e. g.
 - ▷ `\ie` for i. e.
 - ▷ `\cf` for cf.
 - ▷ `\etal` for et al.
- `\emisaabbrv` If you miss any frequently used abbreviation for your article, you can easily add it using `\emisaabbrv{<abbreviation_macro>}{<text>}` in the preamble of your article.
- `\OMG` In addition to common abbreviations, further initialisms are provided by the class for convenience and for
- `\BPM` a consistent visual appearance. Note that the class uses `SMALLCAPS` for typesetting initialisms. The list of
- `\BPMN` predefined initialisms comprises:
- `\UML`
 - ▷ `\OMG` for OMG (Object Management Group).
 - ▷ `\BPM` for BPM (Business Process Management).
 - ▷ `\BPMN` for BPMN (Business Process Model and Notation).
 - ▷ `\UML` for UML (Unified Modeling Language).

`\emisainitialism` You can add your own initialisms by stating `\emisainitialism{\initialism_macro}{\text}` in the preamble.

11 Quotation marks

`\enquote` It is *highly recommended* to use the `\enquote{quotation}` command to produce correct quotation marks. Note that the command can be nested and will produce correct primary and secondary quotation marks in British English (or American English – depending on the chosen class option), for example `\enquote{A quote \enquote{within a quote}}`. For other quotation macros and environment please consult the csquotes documentation [9].

Alternatively (but not recommended), the correct Unicode characters for the quotation marks in British (American) English can be used. See Wikipedia’s entry for ‘quotation mark’ for further information.

12 Citations and references

`\parencite` The EMISA journal uses its own author-year citation style predefined for the biblatex package (`emisa.cbx`),
`\textcite` and its own style for formatting entries in the list of references (`emisa.bbx`). Consult the biblatex package
`\cite` documentation [8] for an introduction to the citation commands. It is important to use the citation commands properly to follow the journal’s style specifications.

- ▷ `\parencite` is used for citing in parentheses (usually at the end of a sentence). In most cases, page numbers should be provided. Example: `\ldots\ is known \parencite[5]{Knuth1986}` produces ‘... is known (Knuth 1986, p. 5)’. Also use `\parencite` to produce a prefix within parentheses, e.g. `\ldots\ is known \parencite[for a justification, see][5]{Knuth1986}` produces ‘... is known (for a justification, see Knuth 1986, p. 5)’.
- ▷ `\textcite` allows for using the cited work as a subject in the grammatical structure of a sentence. Example: `\textcite{Knuth1986} states that ...` produces ‘Knuth (1986) states that ...’. Additionally, page numbers and further information can be provided, see the biblatex package documentation.
- ▷ `\cite` is used for typesetting the citation without parentheses, and is typically used within parentheses. Example: `(see \cite{Knuth1986})` produces ‘(see Knuth 1986)’. This variant is the least used and should be used with care.

Make sure to format the bibliographic entries consistently! Do not mix abbreviated first names with unabbreviated first names, as for example

`@ARTICLE{key1, author = {{van der Weiden}, J. W. P.} ...`

`@ARTICLE{key2, author = {{van der Weiden}, Jan W. P.} ...`

if both entries refer to the same author. This will lead to unexpected results with respect to the label generation of the citation. Make sure to always abbreviate author first names and to always use curly brackets around multi-word lastnames, e.g. `{van der Weiden}`, J. W. P. in the bibentries.

13 Figures

All line-drawings must be provided as vector graphics (*not* bitmap graphics) in PDF format and all other (non-schematic) figures (e. g. screenshots) must be provided in PDF, JPEG or PNG format in a proper (high) resolution for the intended size of the rendered image to avoid pixelation due to low resolution; bitmap graphics shown in full page width in the submission should at least be of a resolution of two (2) megapixels or at least 1920 pixels wide.

14 Tables

`tabularx` XXX Add instructions for author here XXX

15 Source code listings

`sourcecode` For marking up source code listings, the EMISA class uses the `lstlistings` package (see the package documentation for further information), and provides two customised \LaTeX environments: `sourcecode` and `java`. The `java` environment should be used to format source code listings in the Java programming language, and the `sourcecode` environment should be used to format source code in any other programming language. Note that the source code in either case is typset verbatim, i. e., the author must arrange the input \LaTeX source code according to the intended output. Also note that the two environments have been predefined to always produce a two-column listing positioned at the top of the page. An example illustrates the use of both environments:

XXX enter two examples here XXX

16 Pseudocode and algorithms

`algorithm` EMISA offers some environments for a comfortable integration of source code examples.
`algorithmicx`

17 Commands for use by the editorial office staff only

`\editor` Enter the corresponding editor (or editorial board member) for the article, in the format 'first letter of the first name fullstop tilde last name'. Example: `\editor{A.~Smith}`

`\received` Enter the date of initial reception of the manuscript by the editorial office in the following format. Example: `\received{31~March 2014}`

`\accepted` Enter the date of the acceptance decision of the manuscript and the number of review rounds in the following format. Example: `\accepted[3]{10~January 2016}`

`\volume` Enter the number of the volume in which the article is published. Example: `\volume{11}`

<code>\issue</code>	Enter the issue number and issue date of the article. Format example: <code>\issue{1}{31~January 2016}</code>
<code>\specialissuetitle</code>	Enter the title of the Special Issue to which the article belongs if any. Note that the prefix 'Special Issue on' is added automatically. Example: <code>\specialissuetitle{Multilevel Modelling}</code>
<i>Note that volume, issue number and issue date and, optionally, the title of the special issue appear in the multiline page headline of the article.</i>	
<code>\CCBYNCSAFour</code> <code>\CCBYNCSAThree</code>	If an article is licensed under a Creative Commons BY-NC-SA 4.0 (<code>\CCBYNCSAFour</code>) or 3.0 (<code>\CCBYNCSAThree</code>) license, the reference to the license should be displayed at the end of the article. Read the license text at https://creativecommons.org/licenses/by-nc-sa/4.0/ (for version 4.0; likewise for version 3.0).
<code>\license</code>	Alternatively, enter a license text by <code>\license</code> (or <code>\licence</code>).
<code>\licence</code>	Example: <code>\license{This work is licensed under LPPL 1.3c.}</code>

18 Example file for both, authors and editorial office

```
% Use the option [draft] to mark overfull lines.
\documentclass[british]{emisa}
% The following package imports are recommended, but not obligatory;
% you might want take a look into their respective manuals if you want
% to how they can be used:
\usepackage{amsmath,amssymb,mathtools}
\usepackage{algorithmicx,algorithm}
% Additional package imports go here:
% The document begins here:
\begin{document}
% Optionally, set the style for typesetting source code listings (see
% listings package).
% \lstset{language=Java}
% Take note of the following article environment!
\begin{article}{%
% Enter your bibliography database file here.
% Make sure to use UTF-8 character encoding in the bibliography data
% bases,
% and add the .bib extension for the biblatex package!
\bibliography{emisa.bib}
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
% For editorial office only: Start
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
% Add editorial meta data to appear in the multiline page headline.
\editor{Enter corresponding editor here}
\received{Enter date of manuscript reception here}
\accepted[1]{Enter number of review rounds and date of acceptance here.}
\volume{11} % volume number
\issue{1}{31~Jan~2016} % issue number and issue date
```

```

\specialissuetitle{Title of special issue if publication belongs to a
special issue}
% Add license information at end of article, either
\CCBYNCSAfour % or \CCBYNCSAthree or \license
\license{Enter your license text here}
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
% For editorial office only: End
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
% Enter bibliographic meta data about publication
\title[Insert shorttitle for page headline]{Enter full title here}
\subtitle{Enter subtitle here, or leave empty}
\author*{FirstName LastName of corresponding author}{email@address.org}
\address{Enter affiliation of first (corresponding) author here. Note
that only the starred version of author* accepts a second argument
requiring an email address for the corresponding author.}
\author{FirstName LastName}
\address{Enter affiliation of second and further authors here. Add
further authors following this scheme.}
% Enter abstract, keywords, acknowledgements, authornotes
\abstract{Enter abstract here}
\keywords{Enter at a minimum three keywords here. Keyword1 \and Keyword2
\and Keyword3}
\acknowledgements{Enter acknowledgements here.}
\authornote{If your submission is based on a prior publication and
revises / extends this work, enter a corresponding note here (This
work is based on ...) but DO NOT cite the prior work during the
reviewing process. INSTEAD provide full citations of all prior
publications to the editors during the submission process (use the
text field in the online submission system).}
% Take note of the following closing bracket!
}

\section{Introduction}\label{sec:introduction}
Enter your text here.

\subsection{Subsection title}\label{sec:somelabel}
% Example of a single-column figure (spanning only a single column)
\begin{figure}[htbp]
\centering
%\includegraphics[width=\columnwidth]{<filename>}
\caption{Enter your single-column figure caption here.}
\label{default}
\end{figure}

% Example of a double-column figure (spanning both columns)
\begin{figure*}[htb]
\centering
%\includegraphics[width=\textwidth]{<filename>}
\caption{Enter your double-column figure caption here.}

```

```

\label{default}
\end{figure*}

% Example of a double-column table. Tables should NOT be typeset in a
% single column!
% Note the use of \toprule, \midrule, and \bottomrule!
% DO NOT use vertical rules in tables!
\begin{table*}[tb]
\centering
\caption{Enter your table caption above the table here.}
\begin{tabular}{llllll}
\toprule
column head1 & column head2 & column head3 & column head4 & column head5
& column head6\\
\midrule
cell1 & cell2 & cell3 & cell4 & cell5 & cell6\\
cell1 & cell2 & cell3 & cell4 & cell5 & cell6\\
cell1 & cell2 & cell3 & cell4 & cell5 & cell6\\
cell1 & cell2 & cell3 & cell4 & cell5 & cell6\\
cell1 & cell2 & cell3 & cell4 & cell5 & cell6\\
\bottomrule
\end{tabular}
\label{tab:unique-label}
\end{table*}

% Example of a double-column source code listing.
\begin{lstlisting}[float=htbp,%
caption={Enter your double-column listing caption here.},%
label={lst:helloworld}]
/**
 * The HelloWorldApp class implements an application that
 * simply prints "Hello World!" to standard output.
 */
class HelloWorldApp {
    public static void main(String[] args) {
        System.out.println("Hello World!"); // Display the string.
    }
}
\end{lstlisting}

% Example of a double-column pseudo code with algorithmicx.
\begin{...}
while (r > kRadius/2) {
    r--;
    double a = Math.sqrt(kernel[0][r])/(kRadius-r);
    if (a < sqrtSlope)
        sqrtSlope = a;
    else
        break;
}
\end{...}

```

```

    }
\end{...}

% Formatting the bibliographic data base:
% Please make sure to properly enter all data for each entry
% in the bibliographic database (.bib).
% Pay special attention to formatting names and page numbers,
% see the following example:
%@ARTICLE{key1,
%   author = {{van der Aalst}}, W. M. P.
%   and {van Hee}, K. M.
%   and {van Werf}, J. M.
%   and Verdonk, M.},
%   title = {{Auditing 2.0: Using
%   Process Mining to Support
%   Tomorrow's Auditor}},
%   journal = {Computer},
%   year = {2010},
%   volume = {43},
%   pages = {90--93},
%   number = {3}
%}
\printbibliography
\end{article}
\end{document}

```

19 Implementation

Here, the code of the \LaTeX class `emisa` begins.

```
1 <{*class}
```

19.1 Options

`\@clearglobaloption` We need a macro to remove options from the global to avoid side-effects

```
2 \def\@clearglobaloption#1{%
3   \def\@tempa{#1}%
4   \def\@tempb{\@gobble}%
5   \@for\next:=\@classoptionslist\do
6     {\ifx\next\@tempa
7       \message{Cleared option \next\space from global list}%
8       \else
9         \edef\@tempb{\@tempb,\next}%
10      \fi}%
11   \let\@classoptionslist\@tempb
12   \expandafter\ifx\@tempb\@gobble
13     \let\@classoptionslist\@empty
14   \fi}
```

british option

UKenglish option

```
15 \DeclareOption{british}{%
16   \PassOptionsToPackage{british}{babel}
17   \PassOptionsToPackage{english=british}{csquotes}
18   \@clearglobaloption{british}}
19 \DeclareOption{UKenglish}{%
20   \PassOptionsToPackage{british}{babel}
21   \PassOptionsToPackage{english=british}{csquotes}
22   \@clearglobaloption{british}}
```

american option

USenglish option

```
23 \DeclareOption{american}{%
24   \PassOptionsToPackage{american}{babel}
25   \PassOptionsToPackage{english=american}{csquotes}
26   \@clearglobaloption{american}}
27 \DeclareOption{USenglish}{%
28   \PassOptionsToPackage{american}{babel}
29   \PassOptionsToPackage{english=american}{csquotes}
30   \@clearglobaloption{american}}
```

draft option

final option

@draft switch

If the user requests `draft` we mark any overfull boxes. There is more interesting stuff to be added to this option; one could think of altered running titles or watermarks, for example.

As this option is handed along the package chain it might have other effects, too.

```
31 \newif\if@draft
```

```

32 \DeclareOption{draft}{%
33   \@drafttrue
34   \overfullrule 10pt
35 }%
36 \DeclareOption{final}{%
37   \@draftfalse
38   \overfullrule\z@
39 }%

```

referee option The options referee and review switch to *referee mode*. In referee mode some information at the
noreferee option titlepage are removed in order to allow an anonymous submission.

```

review option      40 \newif\if@referee
noreview option    41 \DeclareOption{referee}{\@refereetrue}
@referee switch    42 \DeclareOption{noreferee}{\@refereefalse}
                   43 \DeclareOption{review}{\@refereetrue}
                   44 \DeclareOption{noreview}{\@refereefalse}

```

cover option Switches cover production on or off. If cover is given then the four cover pages (outer and inner pages of
nocover option front and back, respectively) are produced and added to the document.

```

\coveron           45 \newif\if@cover
\coveroff          46 \def\coveron{\@covertrue}
@cover switch      47 \def\coveroff{\@coverfalse}
                   48 \DeclareOption{cover}{\coveron}
                   49 \DeclareOption{nocover}{\coveroff}

                   50 \newif\if@microtype
                   51 \@microtypetrue
                   52 \DeclareOption{nomicrotype}{\@microtypefalse}

```

Completing option handling, by now unprocessed option are handed over to the base class article and the class options list is processed from the left to the right.

```

53 \PassOptionsToClass{a4paper,twoside,11pt}{article}%
54 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{article}}%
55 \ExecuteOptions{british,final,noreferee,nocover,oneside,openany}%
56 \ProcessOptions*\relax%

57 \IfFileExists{latexrelease.sty}%
58   {\RequirePackage[latest]{latexrelease}}%
59   {\RequirePackage{fixltx2e}}%

```

19.2 Loading the base class and packages

This class is build upon the L^AT_EX standard class article.

```

60 \LoadClass{article}[2001/06/01]%
61 \RequirePackage[utf8]{inputenc}%

```

This loads font definitions for text and mathematics. The package allows the user to select font encodings, and for each encoding provides an interface to ‘font-encoding-specific’ commands for each font. Its most powerful effect is to enable hyphenation to operate on texts containing any character in the font. It is distributed as part of the L^AT_EX 2_ε distribution.

```
62 \RequirePackage[T1]{fontenc}%
```

Since many PostScript fonts only implement a subset of the TS1 encoding which contains text symbols for use with the T1-encoded text fonts, many commands only produce black blobs of ink. The textcomp package is supplied as a part of the L^AT_EX base distribution to resolve the resulting problems [1].

```
63 \RequirePackage[full]{textcomp}%
```

The microtype package provides a L^AT_EX interface to the micro-typographic extensions of pdfT_EX: most prominently, character protrusion and font expansion, furthermore the adjustment of interword spacing and additional kerning, as well as hyphenatable letterspacing (tracking) and the possibility to disable all or selected ligatures [2]. It allows to apply these features to customisable sets of fonts, and to configure all micro-typographic aspects of the fonts in a straight-forward and flexible way. Settings for various fonts are provided.

```
64 \if@microtype
65   \RequirePackage{microtype}%
66 \else
67   \ClassWarning{emisa}{Package `microtype' not loaded!%

70     \MessageBreak get an error when loading microtype}
71 \fi%
```

babel is a package providing an environment in which documents can be typeset in a language other than US English, or in more than one language [3].

```
72 \RequirePackage{babel}%
```

This style option improves the interface for defining floating objects such as figures and tables in L^AT_EX [4]. It adds the notion of a ‘float style’ that governs appearance of floats. New kinds of floats may be defined using a \newfloat command analogous to \newtheorem. This style option also incorporates the functionality of David Carlisle’s style option here, giving floating environments a [H] option which means *Put it here!* (as opposed to the standard [h] option which means *Put it here if possible, or otherwise at the next page if no alternative position is specified.*).

```
73 \RequirePackage{float}
```

The caption package gives the user the possibility to control the look & feel of the captions from floating environments like figure and table. Furthermore it does similar to the caption stuff coming from other packages (like the longtable or supertabular package) [5].

For more information on that see the [english](#), [russian](#), or [german](#) user documentation.

```
74 \RequirePackage[font={small}]{caption}
```

19.2.1 Colour and graphics

graphicx as part of the graphics package provides a key-value interface for optional arguments to the `\includegraphics` command [6].

```
75 \RequirePackage{graphicx}%
```

The package xcolor is a color extension for L^AT_EX and pdfL^AT_EX that provides easy driver-independent access to several kinds of colors, tints, shades, tones, and mixes of arbitrary colors by means of color expressions [7].

```
76 \RequirePackage[fixinclude,table]{xcolor}%
```

The biblatex package [8] is a complete reimplement of the bibliographic facilities provided by L^AT_EX in conjunction with B_BT_EX. It redesigns the way in which L^AT_EX interacts with BibT_EX at a fairly fundamental level. With biblatex, B_BT_EX is only used to sort the bibliography and to generate labels. Instead of being implemented in B_BT_EX's style files, the formatting of the bibliography is entirely controlled by T_EX macros. Good working knowledge in L^AT_EX should be sufficient to design new bibliography and citation styles. There is no need to learn B_BT_EX's postfix stack language. Just like the bibliography styles, all citation commands may be freely (re)defined.

Apart from the features unique to biblatex, the package also incorporates core features of the following packages: babelbib, backref, bibtopic, bibunits, chapterbib, cite, citeref, inlinebib, mlbib, multibib, natbib, splitbib. There are also some conceptual parallels to the amsrefs package. The biblatex package supports split bibliographies, multiple bibliographies within one document, and separate lists of bibliographic shorthands. Bibliographies may be subdivided into parts (by chapter, by section, etc.) and/or segmented by topics (by type, by keyword, etc.). The package is fully localized and can interface with the babel package.

This package requires e-T_EX and the etoolbox package. Installing the csquotes package is recommended.

```
77 \RequirePackage{etoolbox}%
```

We use it with these options:

`style=emisa` sets the base name of the bibliography and citation format files; thus we use *emisa.bbx* and *emisa.cbx* that are defined below.

`natbib=true` enables the use of natbib citation commands with biblatex.

`maxcitenames=3` Author lists with more than two entries are abbreviated with 'et al.'. Note that in the bibliography listing author lists won't be shortened at all.¹

`terseinits` If Initials are given with (false) or without (true) punctuation and whitespace.

`isbn=false` In bibliographies, no ISBNs, ...

`url=false` ... no URLs, ...

`doi=false` ... no DOIs, ...

`eprint=false` ... and no ePrint marks are displayed.

`dashed=false` Identical author entries of consecutive bibliography entries don't get replaced by a dash (beginning with the second one).

¹That is, they *will* be shortened if there are more than 999 authors. That should occur not that often, though.

```

78 \RequirePackage[%
79     style=emisa,%
80     natbib=true,%
81     backend=biber,%
82 ]{biblatex}

83 \ExecuteBibliographyOptions{%
84     maxcitenames=3,%
85     maxbibnames=999,%
86     terseinits=false,%
87     isbn=false,%
88     url=true,%
89     doi=false,%
90     eprint=false,%
91     dashed=false,%
92     bibencoding=inputenc,%
93     sorting=anyt,%
94     hyperref=true%
95 }%

```

This package provides advanced facilities for inline and display quotations [9]. Quotation marks are switched automatically if quotations are nested and can adjust to the current language. There are additional facilities designed to cope with the more specific demands of academic writing, especially in the humanities and the social sciences. All quote styles as well as the optional active quotes are freely configurable.

```

96 \RequirePackage[autostyle=once]{csquotes}

```

19.2.2 Helpers

`twoopt` provides commands to define macros with *two* optional parameters. This package is part of the *Oberdiek* bundle [10].

```

97 \RequirePackage{twoopt}%

```

`environ` provides a new method of defining environments [11].

```

98 \RequirePackage{environ}%

```

`paralist` provides a few new list environments. Itemized and enumerated lists can be typesetted within paragraphs, as paragraphs and in a compact version. Most environments have optional arguments to format the labels. Additionally, the L^AT_EX environments `itemize` and `enumerate` can be extended to use a similar optional argument [12].

The options' meanings are as follows:

- `neveradjust` The width of the labels is never adjusted, not even for environments where you defined the labels manually using the optional argument.
- `defblank` The two environments `inparablank` and `asparablank` will be defined.
- `flushright` The labels in the four lists mentioned above are set flush right.

```

99 \RequirePackage[neveradjust,defblank,flushright]{paralist}%

```

We make the traditional list environments equal the compact ones so there is no visual difference and they are both modifiable easily.

```
100 \let\itemize\compactitem
101 \let\enditemize\endcompactitem
102 \let\enumerate\compactenum
103 \let\endenumerate\endcompactenum
104 \let\description\compactdesc
105 \let\enddescription\endcompactdesc
```

These macros are imported from `paralist`, setting standard enumeration marks and list indentations.

```
106 \setdefaultenum{1.}{a}{i.}{A}%
107 \setdefaultleftmargin{1em}{0.9em}{0.7em}{0.5em}{0.4em}{0.3em}%
108 \setlength{\plitemsep}{3\p@}%
109 \setlength{\pltopsep}{6\p@}
```

`afterpage` implements a command that causes the commands specified in its argument to be expanded after the current page is output [13].

The `xspace` package provides a single command that looks at what comes after it in the command stream, and decides whether to insert a space to replace one “eaten” by the \TeX command decoder. The decision is based on what came after any space, not on whether there was a space (which is unknowable): so if the next thing proves to be punctuation, the chances are there was no space, but if it’s a letter, there’s probably a need for space [14].

`calc` adds infix expressions to perform arithmetic on the arguments of the \LaTeX commands `\setcounter`, `\addtocounter`, `\setlength`, and `\addtolength` [15].

All three packages are part of the tools bundle in the \LaTeX required distribution.

```
110 \RequirePackage{afterpage,xspace,calc}%
```

`geometry` provides an easy and flexible user interface to customize page layout, implementing auto-centering and auto-balancing mechanisms so that the users have only to give the least description for the page layout [16].

An important feature is the package’s ability to communicate the paper size it’s set up to the output (whether via DVI `\specials` or via direct interaction with `pdf \LaTeX`).

```
111 \RequirePackage{geometry}%
```

`eso-pic` adds one or more user commands to \LaTeX ’s shipout actions, making it easy to add some picture commands to any and every page at absolute positions [17].

```
112 \RequirePackage{eso-pic}%
```

19.2.3 Scripts, fonts, and maps

```
113 \RequirePackage{newtxtext}
114 \RequirePackage{newtxmath}
115 \RequirePackage[zerostyle=b, straightquotes]{newtxtt}
116 \if@microtype
117   \UseMicrotypeSet[protrusion]{basicmath} % disable protrusion for tt fonts
118 \fi%
```

To make figures and ligatures searchable when using pdfTeX ≥ 1.40 , glyph-to-unicode translation must be enabled. The default table *glyphtounicode.tex* contains mappings from glyph names to corresponding unicode for embedded fonts. It covers the AGL (Adobe Glyph List), names from *texglyphlist.txt* (part of lcdf-typetools) and *zapfdingbats.txt*, plus a few exceptions.

```
119 \InputIfFileExists{glyphtounicode}%
120   {\ClassInfo{emisa}{Reading file `glyphtounicode.tex`}
121     \pdfgentounicode=1}%
122   {\ClassWarning{emisa}{Couldn't find file `glyphtounicode.tex'}}%

123 \RequirePackage{booktabs}
124 \RequirePackage{listings}
125 \lstset{basicstyle=\ttfamily\small}
126 \RequirePackage{amsmath}
127 \RequirePackage[amsmath, standard, hyperref]{ntheorem}
```

19.3 Hypertext

The hyperref package [18] has to be loaded as late as feasible so it can intercept changes to standard macros by other packages.

```
128 \RequirePackage{url}
129 \urlstyle{same}
130 \RequirePackage[%
131   colorlinks,
132   breaklinks,
133   pdfview=Fit,
134   bookmarksopen,
135   bookmarksnumbered,
136   linkcolor=black,
137   anchorcolor=black,
138   citecolor=black,
139   filecolor=black,
140   urlcolor=black,
141   hyperfootnotes=false
142 ]{hyperref}%

143 \RequirePackage{doclicense}
```

19.4 Tools

`\@ifempty` These determinate if an argument ist empty (or not) and to act consequently. An argument is ,empty',
`\@ifarg` iff it contains nothing or just whitespace. All three macros first test their first argument. If it is empty
`\@ifnoarg` `\@ifempty` then executes the second one, otherwise the third one. `\@ifnoarg` und `\@ifarg` execute
their respective second argument iff the the first one is (not) empty.

Syntax:

```
\@ifempty{<arg>}{<Action_if_empty>}{<Action_if_not_empty>}  
\@ifnoarg{<arg>}{<Action_if_empty>}  
\@ifarg{<arg>}{<Action_if_not_empty>}  
  
144 \begingroup  
145 \catcode`\Z=3  
146 \long\gdef\@M@T@#1#2Z#3#4#5\@nil{#4}  
147 \long\gdef\@ifempty#1{\@M@T@#1ZZ\@secondoftwo\@firstoftwo\@nil}  
148 \long\gdef\@ifarg#1{\@M@T@#1ZZ\@firstofone\@gobble\@nil}  
149 \long\gdef\@ifnoarg#1{\@M@T@#1ZZ\@gobble\@firstofone\@nil}  
150 \endgroup
```

19.5 Basic page layout

The geometry options using the keyval ($\langle key \rangle = \langle value \rangle$) interface can be set either in the optional argument to the `\usepackage` command, or in the argument of the `\geometry` macro. In either case, the argument consists of a list of comma-separated keyval options. `\geometry` acts cumulative; so multiple use just appends options to the list.

```
151 \geometry{%  
152 a4paper,%  
153 portrait,%  
154 twoside,%  
155 ignoreall,%  
156 hcentering,%  
157 textwidth = 162.5mm,%  
158 textheight = 220mm,%  
159 heightrounded,%  
160 columnsep = 12.5mm,%  
161 top = 47mm,%  
162 headheight = 16mm,%  
163 headsep = 13mm,%  
164 marginparwidth = 15mm,%  
165 marginparsep = 5mm,%  
166 footskip = 16mm%  
167 }%  
168 \marginparpush 5mm%  
  
169 \AtBeginDocument{\baselineskip=13.6pt plus 0.5pt}%  
  
170 \parindent=4mm%
```

```

171 \smallskipamount=.5\baselineskip
172 \medskipamount=2\smallskipamount
173 \bigskipamount=2\medskipamount

174 \flushbottom

175 \abovedisplayskip=.5\baselineskip plus .33\baselineskip
176                               minus .33\baselineskip
177 \belowdisplayskip=\abovedisplayskip
178 \abovedisplayshortskip= 0pt plus .33\baselineskip
179 \belowdisplayshortskip=.5\baselineskip plus .33\baselineskip
180                               minus .33\baselineskip

```

19.6 Scripts

`\pageheadfont` Assigning scripts to text elements.

`\pagenumfont` Page head and foot:

```

\pagefootfont 181 \def\pageheadfont{\normalfont}%
               182 \def\pagenumfont{\pageheadfont\bfseries}%
               183 \def\pagefootfont{\pageheadfont}%

```

`\authorfont` The elements of the article titles:

```

\titlefont 184 \def\authorfont{\normalfont\Large}%
\subtitlefont 185 \def\titlefont{\normalfont\bfseries\LARGE\boldmath}%
\abstractfont 186 \def\subtitlefont{\normalfont\bfseries\Large\boldmath}%
               187 \def\abstractfont{\normalfont\itshape}%

```

`\affiliationfont` The elements of the affiliation box:

```

\affiliationauthorfont 188 \def\affiliationfont{\normalfont}
\affiliationaddressfont 189 \def\affiliationauthorfont{\bfseries}
\affiliationemailfont 190 \def\affiliationaddressfont{\mdseries}
                     191 \def\affiliationemailfont{\mdseries}%

```

`\sectionfont` Section headlines:

```

\sec@font 192 \def\sectionfont{%
\para@font 193 \normalfont
           194 \bfseries
           195 \boldmath}%
           196 \def\sec@font{\sectionfont\large}%
           197 \def\para@font{\sectionfont}%

```

`\captionfont` Captions:

```

198 \def\captionfont{\normalfont\small\itshape}

```

19.7 Colours

These are the colour definitions for a couple of elements.

<code>coverbgcolor</code>	<code>color</code>	The colours of the cover background (near 25% grey) and cover text (such as headlines, near 75% grey):
<code>covertextcolor</code>	<code>color</code>	<pre>199 \definecolor{coverbgcolor}{cmyk}{0.15,0.1,0.09,0}% 200 \definecolor{covertextcolor}{cmyk}{0.77,0.76,0.70,0.61}%</pre>
<code>headtextcolor</code>	<code>color</code>	These are the colours of the grey elements in column titles (50% grey) and of the frame and the background
<code>boxframecolor</code>	<code>color</code>	of text boxes like that one used in <code>\editorialboard</code> (100% grey = black and 20% grey, respectively).
<code>boxbgcolor</code>	<code>color</code>	<pre>201 \definecolor{headtextcolor}{gray}{0.5}% 202 \definecolor{boxframecolor}{gray}{1}% 203 \definecolor{boxbgcolor}{gray}{0.8}%</pre>

19.8 Double line spacing

<code>\displayskipstretch</code>		
<code>\setdisplayskipstretch</code>		<pre>204 \newcommand{\displayskipstretch}{\baselinestretch} 205 \newcommand{\setdisplayskipstretch}[1]{\def\displayskipstretch{#1}}</pre>
<code>\setstretch</code>	Line space commands.	<pre>206 \newcommand{\setstretch}[1]{% 207 \def\baselinestretch{#1}% 208 \@currsize 209 }</pre>
<code>\@setsize</code>	Modification of the LaTeX command <code>\@setsize</code> . Stretch the baseline <i>before</i> calculating the strut size. This improves spacing below tabular environments etc., probably.	

The meanings of the arguments to `\@setsize` appear to be (whatever these may signify):

Syntax:

`\@setsize{<current size>}{}{<ignored (!)>}{}`

Note that `\@setsize` (in modern L^AT_EX, `\@setfontsize`, which is called by `\@setsize`) seems to be the only place in purely modern LaTeX where `\@currsize` is set, and `ltxguide.cls` seems to be the only file in the LaTeX base distribution that uses it.

```
210 \def\@setsize#1#2#3#4{%
211   \nomath#1%
212   \let\@currsize#1%
213   \baselineskip #2%
214   \baselineskip=\baselinestretch\baselineskip
215   \parskip=\baselinestretch\parskip
216   \setbox\strutbox \hbox{%
217     \vrule height.7\baselineskip
218           depth.3\baselineskip
219           width\z@}%
220   \skip\footins=\baselinestretch\skip\footins
```

```
221 \normalbaselineskip\baselineskip#3#4}
```

Fix up spacing before and after displayed math (arraystretch seems to do a fine job for inside LaTeX displayed math, since array and eqnarray seem to be affected as expected).

```
222 \everydisplay\expandafter{%
223 \the\everydisplay
224 \abovedisplayskip \displayskipstretch\abovedisplayskip
225 \belowdisplayskip \displayskipstretch\belowdisplayskip
226 \abovedisplayshortskip \displayskipstretch\abovedisplayshortskip
227 \belowdisplayshortskip \displayskipstretch\belowdisplayshortskip
228 }
```

19.9 Document markup

19.9.1 Declaring issue data

The following macros save their argument(s) to internal variables for later usage:

`\journalname` The journal name.

```
229 \def\journalname#1{\@bsphack\def\@journalname{#1}\@esphack}%
230 \journalname{Enterprise Modelling and Information Systems Architectures}%
```

`\issn` The International Standard Serial Number (ISSN) is the standardized international code which allows the identification of any serial publication, including electronic serials, independently of its country of publication, of its language or alphabet, of its frequency, medium, etc.; see the [ISSN web site](#).

Here we have two of them, one for print and one for online issues.

```
231 \long\def\issn#1{\@bsphack\long\def\@issn{#1}\@esphack}%
232 \issn{%ISSN 1860-6059 (Print)\par
233 ISSN 1866-3621 (Online)}%
```

`\volume` Volume number.

```
234 \def\volume#1{\@bsphack\def\@volume{#1}\@esphack}%
235 \volume{\textcolor{red}{0}}%
```

`\issue` Issue number and date.

267 \copyrightholder{\textcolor{red}{\copyright}{holder}}%

```

\title Title, subtitle, and author information for the current article.

\subtitle These macros are a bit special as they accept up to *two* optional arguments together with the obligatory
\author one. The optional arguments are for the running-title (*short*) and the table-of-contents (*ToC*) versions, respectively, of the main entry, if there is any:

Syntax:

```

\title[⟨short_title⟩][⟨ToC_title⟩]{⟨title⟩}
\subtitle[⟨short_subtitle⟩][⟨ToC_subtitle⟩]{⟨subtitle⟩}
\author[⟨short_author⟩][⟨ToC_author⟩]{⟨author⟩}

```

If *no* optional argument is given the obligatory argument will appear in all the respective places.

If *one* optional argument is given then its' value replaces both the *short* and the *ToC* entries.

If *two* optional arguments are given then the value of the first one becomes the *short* headline (et al.) entry, and the second one is reproduced in the table of contents.

If *both* optional arguments are given but the first one is left empty then the *short* entry defaults also to the main value, and only the *ToC* entry is changed.

```

268 \renewcommandtwoopt*\title}[3][ ][ ]{%

\outputarticleappendix The articleappendix and articleappendix* environments collect the material given within them inside an article environment. The collected material is accumulated and output at the article's very end. The basic form articleappendix begins a new page per instance while the starred form articleappendix* does not. Each appendix is wrapped into its own group so things remain local.

```

19.9.2 Page styles

This is the standard page style:

Page Head: three lines of text, `\textwidth` wide and aligned to the inner and outer text body borders, respectively, each above a black horizontal line at full sheet width. The text entries comprise:

Line 1, inner side: journal name;

outer side: no text.

Line 2, inner side: volume/number/issue date, text colour is 50% grey;

outer side: no text.

Line 3, inner side:

▷ left pages: section name;

▷ common right pages: author's name(s);

▷ editorial content, both sides: section or category name;

text colour is 50% grey;

outer side: page number in bold type, coloured black, shifted by an amount of `\headpageoffset` to the outer edge of the page.

Page foot: Mostly empty; sometimes in editorial content sections it shows a black horizontal line from the outer text edge to the inner sheet edge (spine).

`\headwidth` Basic lengths for head and foot elements. `\headwidth` is the overall width of the headbox equalling the page width plus a bleed of three millimeters. It is logically restricted to `\textwidth` by subtracting `\headmargin` at both sides.

`\bleed` *Bleed* is a printing term that refers to printing beyond the edge of the sheet after trimming. The `\bleed` is a measure describing the (small) amount of space by which objects on the border of your document will extend. Please note that this length is not added automatically, but has to be added manually.

`\footrulewidth` The width of the foot rule. As it is drawn asymmetrically (running from the outer text edge to the spine) it has to be a bit smaller than the head box.

`\headfootruleheight` This is the width of all lines in head and foot.

```
474 \newlength{\headwidth}%
475 \newlength{\bleed}%
476 \newlength{\headmargin}%
477 \newlength{\footrulewidth}%
478 \newlength{\headfootruleheight}%
479 \setlength{\bleed}{3mm}%
480 \setlength{\headfootruleheight}{0.4mm}%
```

We want to be able to change `\bleed` in the preamble so we delay the calculations until `\begin{document}`.

```
481 \AtBeginDocument{%
482   \setlength{\headwidth}{\paperwidth+2\bleed}%
483   \setlength{\headmargin}{0.5\headwidth-0.5\textwidth}%
484   \setlength{\footrulewidth}{0.5\headwidth+0.5\textwidth}}%
```

`\headbox` The main formatting routine for the running head is a `tabular*` environment.

```
485 \newcommand{\headbox}[6]{\bgroup%
486   \setstretch{1}%
487   \reset@font\pageheadfont
488   \tabcolsep\z@

19.9.3 Cover and advertisement pages

<p><code>\basecoverfont</code></p> <p><code>\covervolumefont</code></p> <p><code>\covertitlefont</code></p>	<p>These are the font and size definitions for cover pages. We are using the sansserif script from the Libertine package, called <i>Linux Biolinum</i>, in two different sizes with the title font being bold.</p>
<p><code>\coverIbgbname</code></p> <p><code>\coverIVbgbname</code></p> <p><code>\sigmobislogoname</code></p> <p><code>\gislogoname</code></p>	<pre> 560 \def\basecoverfont{\normalfont\sffamily}% 561 \def\covervolumefont{% 562 \basecoverfont\fontsize{6mm}{6mm}\selectfont}% 563 \def\covertitlefont{% 564 \basecoverfont\bfseries\fontsize{11mm}{16.5mm}\selectfont}% 565 \def\coverIbgbname{U1_bg}% 566 \def\coverIVbgbname{U4_bg}% 567 \def\sigmatobislogoname{SIG-MOBIS-logo-300}% 568 \def\sigEMISAlagoname{EMISA-Logo-svg}% 569 \def\gislogoname{GIS-logo_with_text-300}% </pre>
<p><code>\AtPageDeadCenter</code></p> <p><code>\page@empty</code></p>	<p><code>\AtPageDeadCenter</code> centers its argument horizontally and vertically around the geometric page center.</p> <p>This macro is to be used inside some <code>eso-pic ShipoutPicture</code>.</p> <pre> 570 \newcommand{\AtPageDeadCenter}[1]{% 571 \AtPageCenter{\makebox[\z@][c]{% 572 \raisebox{-0.5\totalheight}{\z@}{\z@}{#1}}}% 573 }% 574 \def\page@empty{\relax}% </pre>
<p><code>\pagebg</code></p>	<p>Background color for one whole page plus bleed.</p> <pre> 575 \newcommand{\pagebg}[1]{% 576 \AtPageDeadCenter{% 577 \textcolor{#1}{\rule{\paperwidth+2\bleed}{\paperheight+2\bleed}}}% </pre>

`\thispagebackground` `\thispagebackground` put its obligatory argument into the background of the running page. If there is a non-empty optional argument it will be interpreted as the style of this page (using `\thispagestyle`).

```
578 \newcommand{\thispagebackground}[2][]{%
579   \ifarg{#1}{\thispagestyle{#1}}%
580   \AddToShipoutPicture*{%
581     \unitlength 1mm\relax%
582     {#2}%
583   }%}
```

`\picturepage` `\picturepage` additionally empties and flushes the running page, thus producing a picture-only page.

```
584 \newcommand{\picturepage}[2][empty]{%
585   \thispagebackground[#1]{#2}%
586   \null\clearpage
587 }%
```

`\inputpagegraphic` This loads a picture file to generate a picture-only page from.

```
588 \newcommandtwopt*{\inputpagegraphic}[3][empty][]{%
589   \thispagebackground[#1]{\includegraphics[width=\paperwidth,#2]{#3}}%
590   \null\clearpage
591 }%
```

`\coverpage` `\coverpage` is a special form of the `\picturepage`:

```
592 \newcommand{\coverpage}[2][]{%
593   \ifarg{#1}{\setcounter{page}{#1}}%
594   \picturepage{#2}%
595 }%
```

`\thecovervolumeline` These represent the

```
\thecovertitle
596 \newcommand{\thecovervolumeline}{%
597   \parbox[t]{130mm}{%

611     \vskip8mm
612     \covervolumefont
613     \raggedleft
614     \textbf{An International Electronic Journal\,}}}
```

`\sigmobispage` This macro holds the complete announcement page on the *GI-SIG-MoBIS portal* to be published on the third cover page (backcover, inside).

`\sigmobispage` holds just the contents of the SIG-Mobis ad. It produces a box with an outer width of *zero points* and a height as specified by the inner `minipage` environment. When used as an advertising page it has to be *centered horizontally and vertically* in the page area. This is achieved most easily by using the `\AtPageDeadCenter` utility macro (see section 19.9.3) from `eso-pic` [17].

```
615 \def\sigmatobispage{%

620
621       The GI-SIG-MoBIS portal provides numerous resources on enterprise
622       modelling research, such as a full-text digital library, a
623       bibliography, conference announcements, a glossary and evaluation
624       reports. It is intended to establish the premier forum for an
625       international community in enterprise modelling. The new version
626       is based on a Content Management System allowing authorized users
627       to conveniently upload content. A \BibTeX{} interface allows for
628       conveniently integrating bibliographic data. Information about
629       this journal, such as guidelines for authors, tables of content
630       and full-text access to articles (for GI-SIG-MobIS members only)
631       are also available on the~portal.

709 \fi

```

`\graphicspath` The picture files used above have to be found. Normally they should be somewhere on the \TeX $\$PATH$, probably in the same directory where EMISA is situated. As least as we are in Beta state one might put them into the local subdirectory *figs_base/*; we provide for that by including the following line in the config file.

```

710 \graphicspath{{/figs_base/},{./figs_base/}}

```

19.9.4 Formatting common articles

`\c@article` The `article` and `editorialcontent` environments maintain their own (common) counter. Although it is not referenced anywhere at the moment of writing it is used to reset a couple of other counters with every new one of those environments.

```

711 \newcounter{article}%
712 \@addtoreset{section}{article}%
713 \@addtoreset{footnote}{article}%
714 \@addtoreset{figure}{article}%
715 \@addtoreset{table}{article}%

```

`article` This encapsulates each article.

```

716 \newenvironment{article}[1]{%
717   \clearpage
718   \refstepcounter{article}%

789     The journal \emph{\@journalname} is the official journal of the
790     Special Interest Group on Modelling Business Information Systems
791     within the German Informatics Society (GI-SIG MoBIS).
792
793     The journal Enterprise Modelling and Information Systems
794     Architectures is intended to provide a forum for those who prefer a
795     design-oriented approach. As the official journal of the German
796     Informatics Society (GI-SIG-MoBIS), it is dedicated to promote the
797     study and application of languages and methods for enterprise
798     modelling -- bridging the gap between theoretical foundations and
799     real world requirements. The journal is not only aimed at
800     researchers and students in Information Systems and Computer
801     Science, but also at information systems professionals in industry,
802     commerce and public administration who are interested in innovative
803     and inspiring concepts.

```

```

804
805 The journal's editorial board consists of scholars and practitioners
806 who are renowned experts on various aspects of developing, analysing
807 and deploying enterprise models. Besides Information Systems, they
808 cover various fields of Computer Science.
809
810 \section*{Subscription Information}
811
812 The journal is distributed free of charge for members of the
813 GI-SIG-MoBIS. Membership can be acquired through the German
814 Informatics Society (http://www.gi-ev.de/verein/mitgliedschaft/).
815 Single issues, priced at EUR\,25 each (plus shipment), can be ordered
816 online (http://www.fg-mobis.gi-ev.de/).}

```

`\editorialboard` Outputs the Editorial Board page.

`\editorialboardname` Sets the name of the Editorial Board for use in the table of contents and in `\editorialboard`.

`\editorialboardbody` Sets the contents of the Editorial Board for use in `\editorialboard`.

The vertical size of the Editorial Board will exceed page height if there are more than about 48 name entries and/or other material. To prevent that the grey box is scaled down to a height of `\editorialboxmaxheight` if its natural size is bigger than that.

916 The journal serves to publish results of innovative research on all
917 facets of creating and analysing enterprise models and information
918 systems architectures. For research papers, it is required to
919 satisfy academic standards in terms of originality, level of
920 abstraction and justification of results. Experience reports serve
921 to describe and analyse success stories as well as practical
922 obstacles and resulting research challenges. Topics covered by the
923 journal include, but are not restricted to the following subjects:
924 \begin{itemize}
925 \item Languages and Methods for Enterprise Modelling
926 \item Reusable Domain Models (Reference Models)
927 \item Analysis and Design Patterns
928 \item Modelling of Business Processes and Workflows
929 \item Process-Oriented System Architectures
930 \item Component-Oriented System Architectures
931 \item Conceptual Modelling for Component-Oriented Design
932 \item Ontologies for Enterprise Modelling
933 \item Modelling for Enterprise Application Integration
934 \item Modelling for Data Warehouses
935 \item Modelling to support Knowledge Management
936 \item Model-Driven Development
937 \item Aspect-Oriented Design
938 \item Agile Methods for Enterprise Modelling

```

```

939 \end{itemize}
940 Authors are asked for electronic submissions, which have to be sent
941 to the editor in chief as e-mail attachment. In case of multiple
942 authors, it is required to name one author who acts as contact
943 person. The submission should include a cover page with the paper's
944 title and the names, affiliations and e-mail addresses of all
945 authors. The first page of the paper starts with the title and does
946 not carry the authors' names. A manuscript must be either in MS
947 Word or PDF format. It should not exceed 5.000 words -- this
948 includes an abstract of around 150 words.
949
950 Submitted papers will be reviewed within no more than two months.
951 The review process is double blind. Authors who submit a manuscript
952 guarantee that it has not been published elsewhere, nor is intended
953 to be published elsewhere. Papers that were accepted for
954 publication must be written according to the style defined for the
955 journal. A comprehensive description as well as a corresponding
956 Word template is provided on the web portal of the GI-SIG-MobIS
957 (http://www.fg-mobis.gi-ev.de/).}

```

19.9.8 Sectioning

`\@sect` This internal macro facilitates the representation of unstarred sectioning commands using `\@startsection`.

Syntax:

```
\@sect{<#1: name>}{<#2: level>}{<#3: indent>}{<#4: before skip>}{<#5: after skip>}{<#6: style>}[<#7: toc-heading>]{<#8: heading>}
```

Here is the meaning of all these parameters:

- `<name>` The name of the current sectioning level, e.g., «subsection».
- `<level>` The level number, describing the hierarchical depth of the current sectioning level named in – e.g., chapter = 1, section = 2, etc. This is used namely in the table of contents.
- `<indent>` The indentation of the heading, relative to the left margin. Positive values shift the heading to the right («inward»), negative values to the left («outward»).
- `<before skip>` The absolute value represents the space to leave above the heading. If the value is negative, the first paragraph indent following the heading is suppressed.
- `<after skip>` If positive, then the section heading is typeset on its own line and the value determines the amount of vertical space to leave below the heading. If negative, then the section heading is typeset run-in and the absolute value determines the amount of horizontal space to leave between the heading and the following text.
- `<style>` Commands to set the output style. Since the June 1996 release of L^AT_EX 2_ε the *last* command in this argument may be a command such as `\MakeUppercase` or `\fbox` that takes an argument. The section heading will be supplied as the argument to this command. So setting this to, say, «`\bfseries\MakeUppercase`» would produce bold, uppercase headings.
- `<toc-heading>` The optional string to be output in the table of contents (toc). If not given, the value from `<heading>` is used.
- `<heading>` The heading text to be output in the text body.

These parameters are used also in more high-level sectioning macros up to the familiar user level commands defined below.

```
1075 \def\@sect#1#2#3#4#5#6[#7]#8{%
1076   \ifnum #2>\c@secnumdepth
1077     \let\@svsec\@empty
1078   \else
1079     \refstepcounter{#1}%
```

Since `\@secntformat` might end with an improper `\hskip` which is scanning forward for plus or minus we end the definition of `\@svsec` with `\relax` as a precaution.

```
1080   \protected@edef\@svsec{\@secntformat{#1}}%
1081   \fi
1082   \@tempskipa #5\relax
1083   \ifdim \@tempskipa>\z@
```

If `after skip` is positive, then its value denotes the amount of vertical skip to leave below the heading:

```
1084     \begingroup
1085       #6{\noindent%
```

```

1086      \@hangfrom{\hskip #3\relax\@svsec}%
1087      \raggedright
1088      \interlinepenalty\@M
1089      \strut#8\strut
1090      \@@par}%
1091  \endgroup
1092  \csname #1mark\endcsname{#7}%
1093  \addcontentsline{toc}{#1}{%
1094    \ifnum #2>\c@secnumdepth \else
1095      \protect\numberline{\csname the#1\endcsname}%
1096    \fi
1097    #7}%
1098  \else

```

If `afterskip` is negative, the its absolute value indicates the amount of horizontal skip to leave to the right of the run-in heading.

```

1099  \def\@svsechd{%
1100    #6{\hskip #3\relax
1101    \@svsec #8}%
1102    \csname #1mark\endcsname{#7}%
1103    \addcontentsline{toc}{#1}{%
1104      \ifnum #2>\c@secnumdepth \else
1105        \protect\numberline{\csname the#1\endcsname}%
1106      \fi
1107      #7}}%
1108  \fi
1109  \@xsect{#5}}

```

`\@ssect` The mechanism is very similar for *starred* sectioning commands, but there are few parameters.

Syntax:

```

\@ssect{<#1: indent>}{<#2: before skip>}{<#3: after skip>}{
  <#4: style>}{<#5: heading>}}

```

See also the list on p. 44.

```

1110 \def\@ssect#1#2#3#4#5{%
1111   \@tempskipa #3\relax
1112   \ifdim \@tempskipa>\z@
1113     \begingroup
1114       #4{\noindent%
1115         \hskip #1\relax
1116         \noindent%
1117         \parbox[t]{\linewidth}{%
1118           \raggedright\interlinepenalty\@M#5\strut}\@@par}%
1119     \endgroup
1120   \else
1121     \def\@svsechd{#4{\hskip #1\relax #5}}%
1122   \fi
1123   \@xsect{#3}}

```

`\@secntformat` This formats the counters (including any whitespace) of sectioning headers.

```
1124 \def\@secntformat#1{%  
1125   \csname the#1\endcsname%  
1126   \relax\ \ }%
```

`\section` These are the sectioning commands, all being built on top of `\@startsection`.

Syntax:

```
\@startsection{<#1: name>}{<#2: level>}  
  {<#3: indent>}{<#4: beforekip>}{<#5: afterskip>}  
  {<#6: style>}
```

See also the list on p. 44.

All the user level sectioning commands are defined using `\@startsection`.

Normally the corresponding section level counter is incremented and printed out; the exact output is determined by the definition of the corresponding `\the...` macro. Additionally, the command uses the counter `secnumdepth` to determine the highest section level to be numbered at all. If an asterisk (*) follows the command, then the corresponding section level counter is *not* used and *no* [*altheading*] argument is allowed.

```
1127 \def\section{\@startsection{section}%  
1128   {1}{\z@}%  
1129   {-1\baselineskip plus -2mm minus -2mm}%

```
1142 \def\paragraph{\@startsection{paragraph}%  
1143   {4}{\z@}%  
1144   {-1.5mm plus -1mm minus -0.75mm}%  
1145   {1sp}%  
1146   {\para@font}}%
```

`\subparagraph`

```
1147 \def\subparagraph{\@startsection{subparagraph}%  
1148   {5}{\z@}%  
1149   {-1.5mm}%  
1150   {-1em}%  
1151   {\para@font}}%
```

19.9.9 The table of contents

`\tableofcontents` This typesets the table of contents (ToC). First the page style is set and the title line is typeset, . . .

```
1152 \def\tableofcontents{%  
1153   \onecolumn  
1154   \pagestyle{emisaeditorial}%  
1155   \footruleon  
1156   \title{Table of Contents}%  
1157   \null  
1158   \vskip10mm  
1159   \maketitle  
1160   \vskip15mm  
1161   \bgroup
```

. . . then, after some more adjustments, the entries are read from `\jobname\tableofcontents` using `\@starttoc{toc}` and output.

```
1162   \parindent\z@  
1163   \parskip\z@  
1164   \@starttoc{toc}%  
1165   \egroup  
1166   \onecolumn  
1167 }
```

`\l@article` These two routines output content lines to the ToC.

```
\l@editorialcontent 1168 \newcommand*\l@article{%  
1169   \if!\@subtitle!  
1170     \addtocentry{\@tocauthor}{\thepage}{\@toctitle}%  
1171   \else  
1172     \addtocentry{\@tocauthor}{\thepage}{\@toctitle\ --\ \@tocsubtitle}%  
1173   \fi}%  
1174 \newcommand*\l@editorialcontent{%  
1175   \addtocentry{\@toctitle}{\thepage}{}}%
```

`\addtocentry` `\addtocentry` adds an entry using the typical EMISA layout to the contents listing of choice (default: ToC).

```
1176 \newcommand*\addtocentry[4][toc]{%  
1177   \addtocontents{#1}{\string\emisa@tocentry{#2}{#3}{#4}}}%
```

`\emisa@tocentry` `\emisa@tocentry` typesets that entry.

```
1178 \newcommand{\emisa@tocentry}[3]{%
1179   \makebox[\textwidth][l]{%
1180     \parbox[t]{72.5mm-\@pnumwidth}{\raggedright\textbf{#1}}%
1181     \makebox[\@pnumwidth][r]{\textbf{#2}}%
1182     \hfill
1183     \parbox[t]{85mm}{\raggedright#3}}%
1184   \vspace{3mm}}%
```

The output of ToC entries of level -1 (`\part`) and above is suppressed.

```
1185 \setcounter{tocdepth}{-2}
```

19.9.10 A few abbreviations

`\ie` Macros for a couple of abbreviations used quite frequently.

```
\eg 1186 \newcommand*{\emisa@abbrv}[1]{#1\@xspace}
\cf 1187 \newcommand*{\emisa@abbrv}[2]{\gdef#1{\emisa@abbrv{#2}}}
\etal 1188 \newcommand*{\emisa@initialism}[1]{\textsc{#1}\xspace}
\emisa@abbrv 1189 \newcommand*{\emisa@initialism}[2]{\gdef#1{\emisa@initialism{#2}}}
\emisa@abbrv 1190 \newcommand*{\ie}{\emisa@abbrv{i.e.,}}
\emisa@initialism 1191 \newcommand*{\eg}{\emisa@abbrv{e.g.,}}
\emisa@initialism 1192 \newcommand*{\cf}{\emisa@abbrv{cf.}}
\OMG 1193 \newcommand*{\etal}{\emisa@abbrv{et~al.}}
\BPM 1194 \newcommand*{\OMG}{\emisa@initialism{omg}}
\BPMN 1195 \newcommand*{\BPM}{\emisa@initialism{bpm}}
\UML 1196 \newcommand*{\BPMN}{\emisa@initialism{bpmn}}
1197 \newcommand*{\UML}{\emisa@initialism{uml}}
```

19.9.11 Other macros defined by EMISA

`\meta` Macros for convenience

```
\type 1198 \newcommand{\meta}[1]{\ttfamily\small #1} % designate a meta type (meta class)
1199 \newcommand{\type}[1]{\textsf{#1}} % designate a type (class)
```

19.10 Bibliographies

The infrastructure for that is already present in L^AT_EX [19, ltbib1.dtx] so we have to tinker with just a couple of things.

`\bibliography` bibl_{at}ex defines this macro in a way that it prescribes the bibliography data base(s) globally for the whole of the document. As we need a means to use different bibliography data bases with different articles, we redefine `\bibliography` such that it (1) works globally (bibl_{at}ex style), when used in the preamble; (2) works locally in the document body (as defined here); and (3) appends locally to any globally given bibliography data base(s).

Point 1 is met simply by postponing the redefinition until `\begin{document}`. That way we have the unchanged behaviour in the preamble and the new one after that.

Points 2 and 3 lead to redefining this macro the same way as it was (in principle; see the original definition in *biblatex.sty*) but limited to a local scope.

```

1200 \def\@tempa#1\do\addbibresource#2\nil{%
1201   \ifx\relax#2\relax
1202   \else
1203   \def\@tempa##1\do\addbibresource##2\nil{\def\@preamblecmds{##1##2}}%
1204   \expandafter\@tempa\@preamblecmds\nil
1205   \fi
1206 }
1207 \expandafter\@tempa\@preamblecmds\do\addbibresource\nil
1208 \AfterEndPreamble{%
1209   \DeclareRobustCommand{\bibliography}[1]{%
1210     \addbibresource{#1}}%
1211 }%

1212 \tolerance 1414
1213 \hbadness 1414
1214 \emergencystretch 1.5em
1215 \hfuzz 0.3pt
1216 \widowpenalty=10000
1217 \displaywidowpenalty=10000
1218 \clubpenalty=5000
1219 \interfootnotelinepenalty=9999
1220 \brokenpenalty=2000
1221 \vfuzz \hfuzz

```

Here, the generation of the main class module is paused by the first tag (there are more pieces below); instead, generating a few biblatex-related code files starts with the second tag.

```

1222 </class>
1223 <*biblatex>

```

19.10.1 The EMISA bibliography style

A biblatex *bibliography style* is a set of macros used to output the entries in the bibliography. Bibliography styles are defined in files with the suffix *bbx*. The selected one is loaded at the end of the biblatex package.

Here we produce the EMISA bibliography style by the not so very surprising name *emisa.bbx*. This file will be generated on installation from the following code lines between the `<*bbx>` and `</bbx>` meta-tags.

```

1224 <*bbx>

```

We start by declaring the file name and date.

```

1225 \ProvidesFile{emisa.bbx}[2012/12/21 0.4 EMISA bibliography style]

```

The EMISA bibliography style is built on top of the standard style *authoryear.bbx* being loaded here

...

```
1226 \RequireBibliographyStyle{authoryear}
```

... to be expanded and modified in the following.

`\bibitemlabel` The macro `\bibitemlabel` represents the formatting of the `\bibitem` labels.

```
1227 \newcommand*{\bibitemlabel}[1]{%
```

```
1228   \normalfont #1}
```

`thebibliography` The implementation of the `thebibliography` environment typically makes use of the generic list environment. First a few length registers needed internally are adjusted. Note the infix notation used in some declarations facilitated by the `calc` package.

```
1229 \defbibenvironment{bibliography}
```

```
1230   {\list{}}%
```

```
1231   {\setlength{\labelwidth}{\z@}%
```

```
1232     \setlength{\leftmargin}{\z@}%
```

```
1233     \setlength{\itemindent}{-\leftmargin}%
```

```
1234     \setlength{\itemsep}{.5\baselineskip\@plus.2\baselineskip\@minus.2\baselineskip}%
```

```
1235     \setlength{\parsep}{\bibparsep}%
```

In the bibliography listings we want the name lists not to be abbreviated. Well, a name list containing more than 999 names *will* be abbreviated nevertheless; but then, having a name list *this* long might be a problem in itself.

```
1236   }%
```

```
1237   \let\makelabel\bibitemlabel
```

Adjusting short lines in small paragraphs can be rather hard, so some tolerance is added here.

```
1238   \tolerance 9999
```

```
1239   \emergencystretch 3em
```

```
1240   \hfuzz .5\p@
```

```
1241   \vfuzz\hfuzz
```

This is setting the normal (non-infinite) value of `\clubpenalty` for the whole of this environment, so we must reset its stored value also.

```
1242   \clubpenalty 4000
```

```
1243   \@clubpenalty\clubpenalty
```

```
1244   \widowpenalty 4000
```

This causes a «.» (period) not to produce an end-of-sentence space.

```
1245   \sfcode`\.\@m
```

Inside the bibliography we want no «and» in author lists.

```
1246   \renewcommand*{\finalnamedelim}{\addcomma\space}%
```

```
1247   }%
```

```
1248   {%
```

An empty `thebibliography` environment will cause a warning.

```
1249   \def\@noitemerr{\@latex@warning{Empty `thebibliography' environment}}%
```

```
1250   \endlist}
```

1251 {\item}

Formatting commands: punctuation and spacing, blocks and units The following code is taken from *biblatex.def* and modified at several places (see comments). These are some basic and/or generic macros and might be superseded afterwards by definitions taken from *standard.cbx* or *authoryear.cbx*.

The major segments of a bibliography entry are ‚Äòblocks’ and ‚Äòunits’. A block is the larger segment of the two, a unit is shorter or at most equal in length. For example, the values of fields such as title or note usually form a unit which is separated from subsequent data by a period or a comma. A block may comprise several fields which are treated as separate units, for example publisher, location, and year. An entry is segmented by inserting `\newblock` and `\newunit` commands at suitable places and `\finentry` at the very end. The actual printed output of these is defined in the corresponding `\...punct` macros.

The following commands add punctuation marks but automatically prevent doubling and remove preceding whitespace. Note that the behavior described below is the package default which is adjustable using `\DeclarePunctuationPairs`. Just the commands used in EMISA are discussed here.

`\addperiod` adds a period unless it is preceded by an abbreviation dot or any other punctuation mark.

This command may also be used to turn a previously inserted abbreviation dot into a period, for example at the end of a sentence.

`\addcomma` adds a comma unless it is preceded by another comma, a semicolon, a colon, or a period.

`\addcolon` adds a colon unless it is preceded by a comma, a semicolon, another colon, or a period.

`\isdot` turns a previously inserted literal period into an abbreviation dot. In contrast to `\adddot`, nothing is inserted if this command is not preceded by a period.

The following macros insert space.

`\addspace` adds a breakable interword space.

`\addhighpenspace` adds a space penalized by the value of the `highnamepenalty` counter which holds a penalty affecting line-breaking in names; please refer to the *biblatex* manual for explanation. The counter is initialized to `\hyphenpenalty` at load-time. Higher values lower the number of linebreaks and vice versa. The traditional `BTEX` behavior (no linebreaks at `highnamepenalty` breakpoints) is reached by setting it to ‚Äòinfinite’ ($\geq 10\,000$).

`\addlowpenspace` adds a space penalized by the value of the `lownamepenalty` counter, similar to `highnamepenalty`. The counter is initialized to $0.5\,\text{\hyphenpenalty}$ at load-time.

`\newunitpunct` The separator inserted between “units” in the sense explained above. Here, the definition is just a space.

1252 \renewcommand*{\newunitpunct}{\space}

`\finentrypunct` This inserts the punctuation printed at the very end of every bibliography entry. Here it is simply nothing.

1253 \renewcommand*{\finentrypunct}{\relax}

`\bibsetup` is a generic hook controlling the (low-level) layout of the bibliography and the list of shorthands. The default definition should work fine in most cases.

1254 \renewcommand*{\bibsetup}{%

1255 \interlinepenalty=5000\relax

```

1256 \widowpenalty=10000\relax
1257 \clubpenalty=10000\relax
1258 \biburlsetup
1259 \flushbottom
1260 \frenchspacing
1261 \sloppy}

```

The penalties above are not specific to biblatex but low-level TeX features.

- ▷ `\interlinepenalty` is the penalty assigned to page breaks within a paragraph (i. e., in this case, a bibliography entry);
- ▷ `\clubpenalty` is an additional penalty assigned to page breaks after the first line of a paragraph;
- ▷ `\widowpenalty` is an additional penalty assigned to page breaks before the last line of a paragraph.

Note that the value 10000 means «infinite» as far as TeX is concerned. Setting some penalty to 10000 will unconditionally suppress the respective breakpoint.

The net effect of the above settings is as follows. Breaking a bibliography entry across pages is discouraged, but not suppressed altogether. If a bibliography entry spans less than four lines, TeX will always keep it on one page. If it spans four or more lines, it may be broken across pages, provided that there are at least two lines on the page before and after the break.

These penalties should normally be used in conjunction with `\raggedbottom`. If you don't like that and remove `\raggedbottom` from the definition of `\bibsetup`, make sure to provide some stretchability between bibliography entries by setting `\bibitemsep` to a suitable value, e.g.:

```
\setlength{\bibitemsep}{0.5\baselineskip plus 0.5\baselineskip}
```

`\biburlsetup` This is some local setup in order to use `\url` properly.

To ease the job of folding long URLs into narrow columns the following code allows linebreaks after numbers as a last resort. The macro also allows breaks after hyphens and adjusts `\Urlmuskip` to add some stretchability to URL strings.

```

1262 \renewcommand*{\biburlsetup}{%
1263   \Urlmuskip=0mu plus 2mu\relax
1264   \mathchardef\UrlBreakPenalty=200\relax
1265   \mathchardef\UrlBigBreakPenalty=100\relax
1266   \mathchardef\UrlEmergencyPenalty=9000\relax
1267   \appto\UrlSpecials{%
1268     \do\0{\mathchar`\0\penalty\UrlEmergencyPenalty}%
1269     \do\1{\mathchar`\1\penalty\UrlEmergencyPenalty}%
1270     \do\2{\mathchar`\2\penalty\UrlEmergencyPenalty}%
1271     \do\3{\mathchar`\3\penalty\UrlEmergencyPenalty}%
1272     \do\4{\mathchar`\4\penalty\UrlEmergencyPenalty}%
1273     \do\5{\mathchar`\5\penalty\UrlEmergencyPenalty}%
1274     \do\6{\mathchar`\6\penalty\UrlEmergencyPenalty}%
1275     \do\7{\mathchar`\7\penalty\UrlEmergencyPenalty}%
1276     \do\8{\mathchar`\8\penalty\UrlEmergencyPenalty}%
1277     \do\9{\mathchar`\9\penalty\UrlEmergencyPenalty}}%
1278   \def\UrlBreaks{%

```

```

1279 \do\.\do\@\do\/\do\\do\!\do\_do\|\do\;\do>\do\]\do\)\do\}%
1280 \do\,\do\?\do\'do\+do\=do\#do\$do&do*do^do\"}%
1281 \def\UrlBigBreaks{\do\:\do\-%}

```

URLs are typeset in sans-serif script.

```

1282 \def\UrlFont{\sffamily}%
1283 }

```

For further details please see the documentation of the url package as well as the comments inside `url.sty`.

Miscellaneous field formatting directives This subsection introduces biblatex commands and utility macros used to define the formatting directives required by the data commands.

The following list shows a few frequently used ones; those more rarely used are described below.

\DeclareFieldFormat[*<entry type>*]{*<format>*}{*<code>*} defines the formatting code given in *<code>* to be executed by `\printfield` on processing the field *<format>*. The value of the field will be passed to *<code>* as its first and only argument. If an *<entry type>* is specified, the format is specific to that type; otherwise it applies to all entry types defined. The name of the field currently being processed is available in `\currentfield`.

\DeclareFieldAlias[*<entry type>*]{*<alias>*}[*<format entry type>*]{*<format>*} declares *<alias>* to be an alias of the field format *<format>*. If an *<entry type>* is specified, the alias is specific to that type. The *<format entry type>* is the entry type of the backend format. This is only required when declaring an alias of a type specific formatting directive.

\bibstring[*<wrapper>*]{*<key>*} prints the bibliography string identified by *<key>*. The string will be capitalized as required. Depending on the `abbreviate` package option, `\bibstring` prints the short or the long version of the string. If bibliography strings are nested, i. e., if `\bibstring` is used in another string, it will behave like `\bibxstring`. If the *<wrapper>* argument is given, the string is passed to the *<wrapper>* for formatting. This is intended for font commands such as `\emph`.

\bibcpstring[*<wrapper>*]{*<key>*} Similar to `\bibstring` but the string is always capitalized.

\bibxstring{*<key>*} is a simplified but expandable version of `\bibstring`. Note that this variant does not capitalize automatically, nor does it hook into the punctuation tracker. It is intended for special cases in which strings are nested or an expanded bibliography string is required in a test.

The `citetitle` format is used to output the title field in citations.

```

1284 \DeclareFieldFormat{citetitle}{#1}
1285 \DeclareFieldFormat[article]{citetitle}{#1\isdot}
1286 \DeclareFieldFormat[inbook]{citetitle}{#1\isdot}
1287 \DeclareFieldFormat[incollection]{citetitle}{#1\isdot}
1288 \DeclareFieldFormat[inproceedings]{citetitle}{#1\isdot}
1289 \DeclareFieldFormat[patent]{citetitle}{#1\isdot}
1290 \DeclareFieldFormat[thesis]{citetitle}{#1\isdot}
1291 \DeclareFieldFormat[unpublished]{citetitle}{#1\isdot}

```

The following field formats are used for output in bibliographies.

```

1292 \DeclareFieldFormat{booktitle}{#1\isdot}
1293 \DeclareFieldFormat{journaltitle}{#1}
1294 \DeclareFieldFormat{issuetitle}{#1}

```

```

1295 \DeclareFieldFormat{maintitle}{#1}
1296 \DeclareFieldFormat{title}{#1}
1297 \DeclareFieldFormat[article]{title}{#1\isdot}
1298 \DeclareFieldFormat[inbook]{title}{#1\isdot}
1299 \DeclareFieldFormat[incollection]{title}{#1\isdot}
1300 \DeclareFieldFormat[inproceedings]{title}{#1\isdot}
1301 \DeclareFieldFormat[patent]{title}{#1\isdot}
1302 \DeclareFieldFormat[thesis]{title}{#1\isdot}
1303 \DeclareFieldFormat[unpublished]{title}{#1\isdot}
1304 \DeclareFieldFormat{url}{\url{#1}}
1305 \DeclareFieldFormat{urldate}{\bibstring{urlseen}\addcolon\space#1}
1306 \DeclareFieldAlias[misc]{note}{urldate}
1307 \DeclareFieldAlias[report]{note}{urldate}
1308 \DeclareFieldAlias[thesis]{note}{urldate}
1309 \DeclareFieldFormat{version}{\bibcpstring{version}~#1}
1310 \DeclareFieldFormat{volume}{\bibcpstring{volume}~#1}
1311 \DeclareFieldFormat{volumes}{#1~\bibcpstring{volumes}}

```

Formatting names and name lists The following code morsels are taken from *biblatex.def* and modified.

The section employs special biblatex commands to (re)define or use macros in bibliography and citation styles.

\newbibmacro{<name>}[<arguments>][<optional>]{<definition>} defines a macro to be executed via **\usebibmacro** later. The syntax and argument handling of this command is very similar to **\newcommand** except that

- ▷ *<name>* may contain characters such as numbers and punctuation marks but no backslash, and
- ▷ **\newbibmacro** issues just a warning message if the macro is already defined, then falls back to **\renewbibmacro**.

\renewbibmacro{<name>}[<arguments>][<optional>]{<definition>} is similar to **\newbibmacro** but redefines *<name>*. If the macro is undefined, **\renewbibmacro** issues a warning message and falls back to **\newbibmacro**.

\usebibmacro{<name>} executes the biblatex macro *<name>*, as defined with **\newbibmacro**. If the macro takes any arguments, they are simply appended after *<name>*. **\usebibmacro** is robust.

All the formatting directives for name lists get the following «arguments»:

- #1 = last name
- #2 = last name (initials)
- #3 = first name
- #4 = first name (initials)
- #5 = name prefix, a.k.a. ‘von part’
- #6 = name prefix (initials)
- #7 = name affix, a.k.a. ‘junior part’
- #8 = name affix (initials)

This declares the output format of name lists to be used by `\printnames`.

```
1312 \DeclareNameFormat{emisa:names}{%  
1313   \usebibmacro{name:last-firstinit}{#1}{#4}{#5}{#7}%  
1314   \usebibmacro{name:andothers}}
```

This bibmacro formats the names of authors, editors or translators.

me:last-firstinit

```
bibmacro 1315 \newbibmacro*{name:last-firstinit}[4]{%  
1316   \usebibmacro{name:delim}{#2#3#1}%  
1317   \usebibmacro{name:hook}{#2#3#1}%
```

Formatting: name prefix ('von part'), ...

```
1318   \ifblank{#3}{}{%  
1319     \mkbibnameprefix{#3}%\isdot  
1320     \ifpunctmark{'}  
1321     {}  
1322     {\ifuseprefix{\addhighpenspace}{\addlowpenspace}}}%
```

... last name ...

```
1323   \mkbibnamelast{#1}\addhighpenspace
```

... name affix ('junior part'), ...

```
1324   \ifblank{#4}{}{\addlowpenspace\mkbibnameaffix{#4}\addlowpenspace}%
```

... and first name (initials).

```
1325   \ifblank{#2}{}{\mkbibnamefirst{#2}\isdot}%  
1326 }%
```

in: bibmacro This outputs the «in:» tag, as in bibliography entries for proceedings, collections, edited books and so on.

```
1327 \renewbibmacro*{in:}{%  
1328   \printtext{%  
1329     \bibcpstring{in}%  
1330     \intitlepunct}}
```

Generic bibliography macros In this subsection the generic bibmacros outputting the typical name fields in bibliographies are customised.

author bibmacro

```
1331 \renewbibmacro*{author}{%  
1332   \ifthenelse{\ifuseauthor\AND\NOT\ifnameundef{author}}  
1333     {\printnames{author}%  
1334     \iffieldundef{authortype}  
1335     {}  
1336     {\setunit{\addspace}%  
1337     \usebibmacro{authorstrg}}}  
1338   {}}
```

editor bibmacro

```
1339 \renewbibmacro*{editor}{%
1340   \ifthenelse{\ifuseeditor\AND\NOT\ifnameundef{editor}}
1341     {\printnames{editor}%
1342      \setunit{\addspace}%
1343      \usebibmacro{editorstrg}%
1344      \clearname{editor}}
1345   {}}
```

editor+others bibmacro

```
1346 \renewbibmacro*{editor+others}{%
1347   \ifthenelse{\ifuseeditor\AND\NOT\ifnameundef{editor}}
1348     {\printnames[emsa:names]{editor}%
1349      \setunit{\addspace}%
1350      \usebibmacro{editor+othersstrg}%
1351      \clearname{editor}}
1352   {}}
```

translator bibmacro

```
1353 \renewbibmacro*{translator}{%
1354   \ifthenelse{\ifusetranslator\AND\NOT\ifnameundef{translator}}
1355     {\printnames{translator}%
1356      \setunit{\addspace}%
1357      \usebibmacro{translatorstrg}%
1358      \clearname{translator}}
1359   {}}
```

translator+others bibmacro

```
1360 \renewbibmacro*{translator+others}{%
1361   \ifthenelse{\ifusetranslator\AND\NOT\ifnameundef{translator}}
1362     {\printnames{translator}%
1363      \setunit{\addspace}%
1364      \usebibmacro{translator+othersstrg}%
1365      \clearname{translator}}
1366   {}}
```

editor+othersstrg bibmacro

```
1367 \renewbibmacro*{editor+othersstrg}{%
1368   \iffieldundef{editortype}
1369     {\ifthenelse{\value{editor}>1\OR\ifandothers{editor}}
1370      {\def\abx@tempa{editors}}
1371      {\def\abx@tempa{editor}}}
1372     {\ifthenelse{\value{editor}>1\OR\ifandothers{editor}}
1373      {\edef\abx@tempa{\thefield{editortype}s}}
1374      {\edef\abx@tempa{\thefield{editortype}}}}}%

```

Here, the EMISA bibliography style file *emisa.bbx* ends.

```

2103 </bbx>

```

19.10.2 The EMISA citation style

A citation style is a set of commands such as `\ite` which print different types of citations. Such styles are defined in files with the suffix `cbx`. The `biblatex` package loads the selected citation style file at the end of the package. Note that a small repertory of frequently used macros shared by several of the standard citation styles is also included in `biblatex.def`. This file is loaded at the end of the package as well, prior to the selected citation style.

The EMISA citation style is defined in the file `emisa.cbx` which is generated from the following code lines between the `<*cbx>` and `</cbx>` meta-tags.

```
2104 <*cbx>

2105 \ProvidesFile{emisa.cbx}[2010/09/24 0.3 EMISA citation style]
2106 \RequireCitationStyle{authoryear-comp}
2107 \renewcommand*{\nameyear delim}{\addspace}
```

`\DeclareRangeChars` configures the `\ifnumerals` and `\ifpages` tests. The setup will also affect `\iffieldnums` and `\iffieldpages` as well as `\mkpageprefix` and `\mkpagetotal`. The argument is an undelimited list of characters which are to be considered as range indicators. The regular version of this command replaces the current setting, the starred version appends its argument to the current list. The default setting is `{~,; -+ /}`, so strings like “3–5”, “35+”, “8/9” and so on will be considered as a range.

Here we add the character `f` to enable ranges like “123f” and “456ff”.

```
2108 \DeclareRangeChars*{f}
```

Here, the EMISA citation style file `emisa.cbx` ends.

```
2109 </cbx>
2110 </biblatex>
2111 <*class>
```

Here, the \LaTeX class EMISA ends.

```
2112 </class>
```

19.11 Examples and templates

19.11.1 Document templates

Here we add a couple of small document templates to ease the creation of documents: `emisa-article-template.tex` for article authors and `emisa-issue-template.tex` for copy editors. Both are generated from the following piece.

```
2113 <*template>
2114 <*article>
2115 \documentclass[british]{emisa}
2116 %% You can use this additional option (e.g., "[english,draft]"):
2117 %% draft -- this marks overfull lines
2118 </article>
2119 <issue>\documentclass[final,cover]{emisa}
2120 <*article | issue>
```

```

2121 %% The following package imports are recommended, but not obligatory;
2122 %% you might want take a look into their respective manuals if you
2123 %% don't know what they do.
2124 \usepackage{amsmath,amssymb,mathtools}
2125 \usepackage{algorithmicx,algorithm}
2126 %% Additional package imports go here:
2127 </article | issue>
2128 < *issue>
2129 %% Insert here issue data:
2130 \volume{}% Volume No.
2131 \issue{}{}% Issue No. and Issue Date
2132 %% If there are any bibliography data bases to be used globally
2133 %% please indicate here:
2134 \bibliography{}
2135 %% Insert here any (relative or absolute) path to be searched for
2136 %% graphics files:
2137 \graphicspath{{./figs_base/},{}}
2138 %% Here you can alter the cover pages; e.g. this:
2139 %% \coverII{\AtPageDeadCenter{Something}}
2140 %% typesets the word "Something" centered on the inner side of the
2141 %% front sheet.
2142 %% You can also delete any cover pages at all by defining them empty,
2143 %% see below:
2144 \coverII{}
2145 %% This outputs the SIG-MOBIS page on the inner side of the back
2146 %% sheet:
2147 \coverIII{\AtPageCenter{\sigmobispage}}
2148 </issue>
2149 < *article | issue>
