# A LATEX class for preparing manuscripts for submissions to the OA journal 'Enterprise Modelling and Information Systems Architectures – An International Journal' (EMISA)

Stefan Strecker (stefan.strecker@fernuni-hagen.de)
Martin Sievers (martin.sievers@schoenerpublizieren.de)

20th January 2016

# 1 Introduction

Enterprise Modelling and Information Systems Architectures – An International Journal (EMISA) is a publisher-independent, peer-reviewed scholarly open access journal (http://emisa-journal.org). EMISA is published by the German Informatics Society (GI) and is a publication of its Special Interest Group (SIG) on Modelling Business Information Systems (SIG MoBIS) and its SIG on Design Methods for Information Systems (SIG EMISA). SIG MoBIS has sponsored the development of the EMISA LATEX package currently maintained by Stefan Strecker (stefan.strecker@fernuni-hagen.de) and Martin Sievers (martin.sievers@schoenerpublizieren.de).

The EMISA LATEX document class is provided for preparing manuscripts for submission to EMISA, and for preparing accepted submissions for publication as well as for typesetting the final publication by the editorial office. Articles in EMISA are published online at <a href="http://emisa-journal.org">http://emisa-journal.org</a> (in the Portable Document Format or PDF format). The EMISA editorial office is run (alongside many other tasks and projects) by the two Editors-in-Chief assisted by three doctoral students. Editorial work at EMISA is best described as a volunteer effort for the scientific community. Please assist us by preparing your manuscript following the instructions and style guidelines described in this document: Your work will be published quicker with less (typographical) glitches and will have a professional appearance.

# 2 Installation

The EMISA LATEX package consists of the EMISA LATEX class emisa.cls, the biblatex bibliography style emisa.bbx and the biblatex citation style emisa.cbx. The package also includes the present instructions and guidelines for authors on formatting the source files of the manuscript to achieve a pleasing and typographically consistent visual appearance of the manuscript. The package is available from the Comprehensive TeX Archive Network (CTAN, https://ctan.org) and should be available for

installation through the respective TEX distribution's package installer. For a manual installation, run pdflatex emisa.ins and pdflatex emisa.dtx twice, and copy the resulting files to the same directory (folder) in which the source files for the manuscript will be maintained.

# 3 Instructions and guidelines

This document provides instructions and style guidelines for authors. The instructions and guidelines address main aspects of scholarly writing (e. g. citations, references, figures, tables, source code and pseudocode listings). Follow the instructions and guidelines in the present document to set up your files, to type in your text, to format figures, tables, source code listings and algorithms, and to obtain a consistent appearance in accordance with the journal's style specifications.

It is recommended to use these instructions and guidelines as a checklist before submitting your manuscript to the journal's online submission system at <a href="http://emisa-journal.org">http://emisa-journal.org</a>. Note that these instructions are *not* intended as a general introduction to LATEX2e and corresponding tools (see, for example, <a href="https://www.ctan.org/tex-archive/info/lshort/english/">https://www.ctan.org/tex-archive/info/lshort/english/</a> for 'The not so Short Introduction to LATEX').

# 4 Preliminary remarks

The EMISA document class is derived from the standard LaTeX article class, and produces a customised two-column layout with bibliographic information about the manuscript in a multi-line page header (including the name of the journal, volume and issue number, year, title as well as author names) on A4-sized paper.

The EMISA class builds on a number of standard LATEX packages available in distributions such as TEXLive and MikTeX. It is highly recommended to install the *full* set of packages for the used distribution to make the required packages available to the EMISA class. Alternatively, missing packages may be installed on-the-fly.

The list of required packages for using the EMISA class is rather comprehensive (see emisa.cls) but the class implementation has taken care to use only packages commonly included in TeX distributions such as TeXLive and MikTeX. Among the packages required by the EMISA class are geometry, newtxtext, newtxmath, newtxtt, ntheorem, amsthm, booktabs, tabularx (see emisa.cls for a comprehensive overview).

The production process at the EMISA editorial office is based entirely on LaTeX, and runs pdfLaTeX and biber to produce the final proof and publication of an article. The biblatex package is used to typeset citations and references in conjunction with the biber tool. Make sure to use biber rather than bibtex to process the bibliography file(s). The production tool chain at the editorial office requires that all text files of an article are provided in *UTF-8 file encoding*, and that all line-drawing figures are submitted as vector graphics (*not* bitmap graphics) in PDF format, and that all other (non-schematic) figures are submitted in PDF, JPEG or PNG format.

# 5 Class Options

british English is the language of choice for publishing in EMISA. The class option 'british' is preloaded by default to obtain the correct hyphenation for British English (as provided by the babel package). The class option *may be* used with the EMISA class to exemplify the use of British English. Example: \documentclass[british]{emisa}. This is the standard option.

referee, review

By default, a final version of the manuscript is typeset for online publication including the names and affiliations of authors. For reviewing purposes, the names and affiliations of the authors are omitted using the document option 'referee' or 'review' to allow for the anonymous (i. e. double blind) peer-review process of the EMISA journal. Example: \documentclass[referee] {emisa}.

# 6 Author information

\author\* There has to be one corresponding author stated by \author\* { $\langle author's name \rangle$ } { $\langle email address \rangle$ }.

# 7 Title, subtitle, abstract, and keywords

\title The mandatory title and optional subtitle of a manuscript are typeset using \title{\lambda title} and \subtitle {\lambda title}. EMISA defines a \title{\lambda title} and \subtitle{\lambda subtitle} command \abstract for typesetting the manuscript title and subtitle. The abstract of the manuscript is typeset using \keywords \abstract{\lambda bstract}{\lambda bstract}. Each manuscript should provide an abstract of about 200 words Keywords describing the manuscript are typeset using \keywords{\lambda eywords}} and concatenated using \and. For example, \keywords{\keyword1} \and keyword2}. At least three keywords should be provided.

# 8 Additional information on the first (title) page

\acknowledgments Acknowledgements, for example, of collaborators, funding agencies etc. may be added using \acknowledgements{\acknowledgements\}. The acknowledgements are typset in a footnote on the first page following the corresponding author's email address.

\authornote Additional information for reviewers and readers may be added in a footnote on the titlepage using \authornote{\author note}}. This is typically used for stating earlier publications (e. g. in conference proceedings) on which the present manuscript is based.

# 9 Regular text

A few conventional rules apply to writing regular text: for publication in the EMISA journal.

- Manuscripts should *not* make use of outdated LaTeX commands such as \em but rather use the LaTeX2e commands (e.g. \emph, \textt).
- ▷ Do *not* make use of bold face (\textbf). Use \textbf instead to typeset an important word in italics!
- ▶ Always use ~ to connect before  $\ref{\langle label \rangle}$ , i. e., Sec. ~\ref{label} rather than the problematic: Sec. \ref{label}.
- Do *not* write abbreviations such as e.g. but use the macros provided by the EMISA class (see below). Add punctuation when necessary, for example, write, \ie, to achive the correct punctuation for 'id est' (i.e.) rather than, i.e., which introduces two problems: A missing spacing after the first full stop and a wrong spacing after the second full stop.
- ▶ Follow the journal's style specification with respect to predefined text styles:
  - Use smallcaps for names of open-source projects, products and companies etc, e.g., \textsc{eclipse} to produce eclipse.
  - Use non-proportional font for language concepts, meta types, meta classes etc., e.g., \texttt{AbstractGoalType} to produce AbstractGoalType.
  - Use the sans-serif font face for type-level concepts etc., e.g., \textsf{Goal} to produce Goal.

# 10 Abbreviations and initialisms

- \eg To achieve consistent typesetting of common abbreviations, macros are predefined by the EMISA class.
- \ie These macros should consistently being used instead of writing the plain version. For example use \eg
- \cf rather than 'e.g.'. The macros take care of spacing within and after the abbreviations. The list of \etal predefined abbrevations includes: \eg \ie \ea
  - ▶ \eg for e. g.
  - ▶ \ie for i.e.
  - ▶ \cf for cf.
  - ▶ \etal for et al.
- \OMG In addition to common abbreviations, further initialisms are provided by the class for convenience and for
- \BPM a consistent visual appearance. Note that the class uses smallcaps for typesetting initialisms following
- \BPMN Brinkhurst XXX. The list of predefined initialisms includes:

\UML

- ▶ \ОМG for омс (Object Managment Group).
- ▶ \ВРМ for врм (Business Process Management).
- ▶ \BPMN for BPMN (Business Process Model and Notation).
- ▶ \UML for UML (Unified Modeling Language).

# 11 Quotation marks

\enquote It is highly recommended to use the \enquote $\{\langle quotation \rangle\}$  command to produce correct quotation

marks in British English. Note that the command can be nested and will produce correct primary and secondary quotation marks in British English, for example \enquote{A quote \enquote{with in a quote}}. Alternatively, the correct Unicode characters can be used, i. e., Unicode 2018 and Unicode 2019 for the primary quotation marks, and Unicode 201C as well as Unicode 201D for the secondary quotation marks. or LATEX command \lq for the opening primary quotation mark, and Unicode 2019 or LATEX command \rq for the closing primary quotation mark.

# 12 Citations and references section

\parencite
 \textcite
 \cite

The EMISA journal uses its own author-year citation style predefined for the biblatex package (emisa.cbx), and its own style for formatting entries in the list of references (emisa.bbx). Consult the biblatex package documentation for an introduction to the citation commands. It is important to use the citation commands properly to follow the journal's style specifications.

# 13 Figures

All line-drawings must be provided as vector graphics (*not* bitmap graphics) in PDF format and all other (non-schematic) figures (e. g. screenshots) must be provided in PDF, JPEG or PNG format in a proper (high) resolution for the intended size of the rendered image to avoid pixelation due to low resolution; bitmap graphics shown in full page width in the submission should at least be of a resolution of 3 megapixels or at least 2048 pixels wide.

## 14 Tables

tabularx

# 15 Source code listings

sourcecode java For marking up source code listings, the EMISA class uses the lstlistings package (see the package documentation for further information), and provides two customised LaTeX environments: \sourcecode and \java XXX Hier kenne ich die Befehle zur Erstellung der Befehlsform nicht, \env gibt es nicht XXX. The java environment should be used to format source code listings in the Java programming language, and the sourcecode environment should be used to format source code in any other programming language. Note that the source code in either case is typset verbatim, i. e., the author must arrange the input LaTeX source code according to the intended output. Also note that the two environments have been predefined to always produce a two-column listing positioned at the top of the page. An example illustrates the use of both environments:

XXX enter two examples here XXX

# 16 Pseudocode and algorithms

algorithm algorithmcx

EMISA offers some environments for a comfortable integration of source code examples.

# 17 Implementation

Here, the code of the LATEX class emisa begins.

1 (\*class)

# 17.1 Options

british option

2 \PassOptionsToPackage{british}{babel}

draft option
final option
@draft switch

If the user requests draft we mark any overfull boxes. There is more interesting stuff to be added to this option; one could think of altered running titles or watermarks, for example.

As this option is handed along the package chain it might have other effects, too.

- 3 \newif\if@draft
- 4 \DeclareOption{draft}{%
- 5 \@drafttrue
- 6 \overfullrule 10pt
- 7 }%
- 8 \DeclareOption{final}{%
- 9 \@draftfalse
- 10 \overfullrule\z@
- 11 }%

referee option noreferee option

The options referee and review switch to *referee mode*. In referee mode some information at the titlepage are removed in order to allow an anonymous submission.

review option noreview option

- 12 \newif\if@referee
- 13 \DeclareOption{referee}{\@refereetrue}
- - 15 \DeclareOption{review}{\@refereetrue}
  - 16 \DeclareOption{noreview}{\@refereefalse}

cover option

Switches cover production on or off. If cover is given then the four cover pages (outer and inner pages of front and back, respectively) are produced and added to the document.

\coveron
\coveroff
@cover switch

- 17 \newif\if@cover
- 18 \def\coveron{\@covertrue}
- 19 \def\coveroff{\@coverfalse}
- 20 \DeclareOption{cover}{\coveron}
- 21 \DeclareOption{nocover}{\coveroff}
- 22 \newif\if@microtype
- 23 \@microtypetrue
- 24 \DeclareOption{nomicrotype}{\@microtypefalse}

Completing option handling, by now unprocessed option are handed over to the base class article and the class options list is processed from the left to the right.

- 25 \PassOptionsToClass{a4paper,twoside,11pt}{article}%
- 26 \DeclareOption\*{\PassOptionsToClass{\CurrentOption}{article}}%
- 27 \ExecuteOptions{final,noreferee,nocover,oneside,openany}%
- 28 \ProcessOptions\*\relax%
- 29 \IfFileExists{latexrelease.sty}%
- 30 {\RequirePackage[latest]{latexrelease}}%
- 31 {\RequirePackage{fixltx2e}}%

## 17.2 Loading the base class and packages

This class is build upon the LATEX standard class article.

- 32 \LoadClass{article}[2001/06/01]%
- 33 \RequirePackage[utf8]{inputenc}%

This loads font definitions for text and mathematics. The package allows the user to select font encodings, and for each encoding provides an interface to ,font-encoding-specific' commands for each font. Its most powerful effect is to enable hyphenation to operate on texts containing any character in the font. It is distributed as part of the LATEX  $2_{\mathcal{E}}$  distribution.

34 \RequirePackage[T1]{fontenc}%

Since many PostScript fonts only implement a subset of the TS1 encoding which contains text symbols for use with the T1-encoded text fonts, many commands only produce black blobs of ink. The textcomp package is supplied as a part of the LATEX base distribution to resolve the resulting problems [?].

35 \RequirePackage[full]{textcomp}%

The microtype package provides a LATEX interface to the micro-typographic extensions of pdfTeX: most prominently, character protrusion and font expansion, furthermore the adjustment of interword spacing and additional kerning, as well as hyphenatable letterspacing (tracking) and the possibility to disable all or selected ligatures [?]. It allows to apply these features to customisable sets of fonts, and to configure all micro-typographic aspects of the fonts in a straight-forward and flexible way. Settings for various fonts are provided.

- 36 \if@microtype
- 37 \RequirePackage{microtype}%
- 38 \else
- 39 \ClassWarning{emisa}{Package 'microtype' not loaded!\MessageBreak Output will differ from fi
- 40 \fi%

babel is a package providing an environment in which documents can be typeset in a language other than US English, or in more than one language [?].

41 \RequirePackage{babel}%

This style option improves the interface for defining floating objects such as figures and tables in LaTeX [?]. It adds the notion of a 'float style' that governs appearance of floats. New kinds of floats may be defined using a \newfloat command analogous to \newtheorem. This style option also incorporates the functionality of David Carlisle's style option here, giving floating environments a [H] option which means *Put it here!* (as opposed to the standard [h] option which means *Put it here if possible, or otherwise at the next page if no alternative position is specified.*).

42 \RequirePackage{float}

The caption package gives the user the possibility to control the look & feel of the captions from floating environments like figure and table. Furthermore it does similar to the caption stuff coming from other packages (like the longtable or supertabular package) [?].

For more information on that see the english, russian, or german user documentation.

43 \RequirePackage[font={small}]{caption}

## 17.2.1 Colour and graphics

graphicx as part of the graphics package provides a key-value interface for optional arguments to the \includegraphics command [?].

44 \RequirePackage{graphicx}%

The package xcolor is a color extension for LATEX and pdfLATEX that provides easy driver-independent access to several kinds of colors, tints, shades, tones, and mixes of arbitrary colors by means of color expressions [?].

45 \RequirePackage[fixinclude,table]{xcolor}%

The biblatex package [?] is a complete reimplementation of the bibliographic facilities provided by LaTeX in conjunction with BibTeX. It redesigns the way in which LaTeX interacts with BibTeX at a fairly fundamental level. With biblatex, BibTeX is only used to sort the bibliography and to generate labels. Instead of being implemented in BibTeX's style files, the formatting of the bibliography is entirely controlled by TeX macros. Good working knowledge in LaTeX should be sufficient to design new

bibliography and citation styles. There is no need to learn BibTeX's postfix stack language. Just like the bibliography styles, all citation commands may be freely (re)defined.

Apart from the features unique to biblatex, the package also incorporates core features of the following packages: babelbib, backref, bibtopic, bibunits, chapterbib, cite, citeref, inlinebib, mlbib, multibib, natbib, splitbib. There are also some conceptual parallels to the amsrefs package. The biblatex package supports split bibliographies, multiple bibliographies within one document, and separate lists of bibliographic shorthands. Bibliographies may be subdivided into parts (by chapter, by section, etc.) and/or segmented by topics (by type, by keyword, etc.). The package is fully localized and can interface with the babel package.

This package requires e-TeX and the etoolbox package. Installing the csquotes package is recommended.

```
46 \RequirePackage{etoolbox}%
```

We use it with these options:

style=emisa sets the base name of the bibliography and citation format files; thus we use *emisa.bbx* and *emisa.cbx* that are defined below.

natbib=true enables the use of natbib citation commands with biblatex.

maxcitenames=3 Author lists with more than two entries are abbreviated with "et al.". Note that in the bibliography listing author lists won't be shortened at all.<sup>1</sup>

terseinits If Initials are given with (false) or without (true) punctuation and whitespace.

```
isbn=false In bibliographies, no ISBNS, ...
```

```
url=false ... no URLs,...
doi=false ... no DOIs,...
```

eprint=false ... and no ePrint marks are displayed.

dashed=false Identical author entries of consecutive bibliography entries don't get replaced by a dash (beginning with the second one).

```
47 \RequirePackage[%
      style=emisa,%
      natbib=true,%
50
      backend=biber,%
51 ]{biblatex}
52 \ExecuteBibliographyOptions{%
     maxcitenames=3,%
53
     maxbibnames=999,%
54
     terseinits=false,%
55
     isbn=false,%
56
     url=true,%
57
     doi=false,%
58
     eprint=false,%
59
     dashed=false,%
60
     bibencoding=inputenc,%
62
     sorting=anyt,%
     hyperref=true%
63
64 }%
```

<sup>&</sup>lt;sup>1</sup>That is, they will be shortened if there are more than 999 authors. That should occur not that often, though.

This package provides advanced facilities for inline and display quotations [?]. Quotation marks are switched automatically if quotations are nested and can adjust to the current language. There are additional facilities designed to cope with the more specific demands of academic writing, especially in the humanities and the social sciences. All quote styles as well as the optional active quotes are freely configurable.

65 \RequirePackage[babel=once,english=british]{csquotes}

#### **17.2.2** Helpers

twoopt provides commands to define macros with *two* optional parameters. This package is part of the *Oberdiek* bundle [?].

66 \RequirePackage{twoopt}%

environ provides a new method of defining environments [?].

67 \RequirePackage{environ}%

paralist provides a few new list environments. Itemized and enumerated lists can be typesetted within paragraphs, as paragraphs and in a compact version. Most environments have optional arguments to format the labels. Additionally, the LATEX environments itemize and enumerate can be extended to use a similar optional argument [?].

The options' meanings are as follows:

**neveradjust** The width of the labels is never adjusted, not even for environments where you defined the labels manually using the optional argument.

defblank The two environments inparablank and asparablank will be defined.

flushright The labels in the four lists mentioned above are set flush right.

68 \RequirePackage[neveradjust,defblank,flushright]{paralist}%

We make the traditional list environments equal the compact ones so there is no visual difference and they are both modifiable easily.

- 69 \let\itemize\compactitem
- 70 \let\enditemize\endcompactitem
- 71 \let\enumerate\compactenum
- 72 \let\endenumerate\endcompactenum
- 73 \let\description\compactdesc
- 74 \let\enddescription\endcompactdesc

These macros are imported from paralist, setting standard enumeration marks and list indentations.

- 75 \setdefaultenum $\{1.\}\{a\}\{i.\}\{A\}\%$
- 76 \setdefaultleftmargin{1em}{0.9em}{0.7em}{0.5em}{0.4em}{0.3em}%
- 77 \setlength{\plitemsep}{3\p@}%
- 78 \setlength{\pltopsep} $\{6\p@\}$

afterpage implements a command that causes the commands specified in its argument to be expanded after the current page is output [?].

The xspace package provides a single command that looks at what comes after it in the command stream, and decides whether to insert a space to replace one "eaten" by the TEX command decoder. The decision is based on what came after any space, not on whether there was a space (which is unknowable): so if the next thing proves to be punctuation, the chances are there was no space, but if it's a letter, there's probably a need for space [?].

calc adds infix expressions to perform arithmetic on the arguments of the LATEX commands \setcounter, \addtocounter, \setlength, and \addtolength [?].

All three packages are part of the tools bundle in the LATEX required distribution.

```
79 \RequirePackage{afterpage,xspace,calc}%
```

geometry provides an easy and flexible user interface to customize page layout, implementing auto-centering and auto-balancing mechanisms so that the users have only to give the least description for the page layout [?].

An important feature is the package's ability to communicate the paper size it's set up to the output (whether via DVI \specials or via direct interaction with pdfLATeX).

80 \RequirePackage{geometry}%

eso-pic adds one or more user commands to LATEX's shipout actions, making it easy to add some picture commands to any and every page at absolute positions [?].

81 \RequirePackage{eso-pic}%

## 17.2.3 Scripts, fonts, and maps

- 82 \RequirePackage{newtxtext}
- 83 \RequirePackage{newtxmath}
- 84 \RequirePackage[zerostyle=b,straightquotes]{newtxtt}
- 85 \if@microtype
- 86 \UseMicrotypeSet[protrusion]{basicmath} % disable protrusion for tt fonts
- 87 \fi%

To make figures and ligatures searchable when using pdf $T_EX \ge 1.40$ , glyph-to-unicode translation must be enabled. The default table *glyphtounicode.tex* contains mappings from glyph names to corresponding unicode for embedded fonts. It covers the AGL (Adobe Glyph List), names from texglyphlist.txt (part of lcdf-typetools) and zapfdingbats.txt, plus a few exceptions.

```
88 \InputIfFileExists{glyphtounicode}%
```

- 89 {\ClassInfo{emisa}{Reading file 'glyphtounicode.tex'}
- 90 \pdfgentounicode=1}%
- 91 {\ClassWarning{emisa}{Couldn't find file 'glyphtounicode.tex'}}%
- 92 \RequirePackage{booktabs}
- 93 \RequirePackage{listings}
- 94 \lstset{basicstyle=\ttfamily\small}
- 95 \RequirePackage{amsmath}

% \RequirePackage[amsmath,standard,hyperref]{ntheorem}

# 17.3 Hypertext

The hyperref package [?] has to loaded as late as feasible so it can intercept changes to standard macros by other packages.

```
97 \RequirePackage{url}
98 \urlstyle{same}
   \RequirePackage[%
     colorlinks,
100
     breaklinks,
101
     pdfview=Fit,
102
     bookmarksopen,
103
     bookmarksnumbered,
104
     linkcolor=black,
105
      anchorcolor=black,
106
     citecolor=black.
107
     filecolor=black,
108
     urlcolor=black,
109
     hyperfootnotes=false
110
      ]{hyperref}%
111
112 \RequirePackage{doclicense}
```

#### **17.4** Tools

\@ifempty
 \@ifarg
\@ifnoarg

These determinate if an argument ist empty (or not) and to act consequently. An argument is ,empty', iff it contains nothing or just whitespace. All three macros first test their first argument. If it is empty \@ifempty then executes the second one, otherwise the third one. \@ifnoarg und \@ifarg execute their respective second argument iff the the first one is (not) empty.

## **Syntax:**

```
\label{eq:continuous} $$ \left( arg \right) { \left( Action_if_empty \right) } \\ \left( arg \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_not_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_not_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_not_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_not_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( Action_if_empty \right) } \\ \left( arg \left( arg \right) \right) { \left( arg \left( arg \right) \right) } \\ \left( arg \left( arg \right) \right) { \left( arg \left( arg \right) \right) } \\ \left( arg \left( arg \left( arg \right) \right) { \left( arg \left( arg \right) \right) } \\ \left( arg \left( arg \left( arg \right) \right) { \left( arg \left( arg \right) \right) } \\ \left( arg \left( ar
```

# 17.5 Basic page layout

The geometry options using the keyval  $(\langle key \rangle = \langle value \rangle)$  interface can be set either in the optional argument to the \usepackage command, or in the argument of the \geometry macro. In either case, the argument consists of a list of comma-separated keyval options. \geometry acts cumulative; so multiple use just appends options to the list.

```

                          17.7 Colours
                          These are the colour definitions for a couple of elements.
                          The colours of the cover background (near 25% grey) and cover text (such as headlines, near 75% grey):
      coverbgcolor color
    covertextcolor color
                            168 \definecolor{coverbgcolor}{cmyk}{0.15,0.1,0.09,0}%
                            169 \definecolor{covertextcolor}\{cmyk\}\{0.77,0.76,0.70,0.61\}%
```

headtextcolor color boxframecolor color

boxbgcolor color

These are the colours of the grey elements in column titles (50% grey) and of the frame and the background of text boxes like that one used in \editorialboard (100% grey = black and 20% grey, respectively).

- 170 \definecolor{headtextcolor}{gray}{0.5}%
- 171 \definecolor{boxframecolor}{gray}{1}%
- 172 \definecolor{boxbgcolor}{gray}{0.8}%

# 17.8 Double line spacing

```
\displayskipstretch
\setdisplayskipstretch

173 \newcommand{\displayskipstretch}{\baselinestretch}

174 \newcommand{\setdisplayskipstretch}[1]{\def\displayskipstretch{#1}}

\setstretch Line space commands.

175 \newcommand{\setstretch}[1]{%

176 \def\baselinestretch{#1}%

177 \@currsize

178 }
```

\@setsize Modification of the LaTeX command \@setsize. Stretch the baseline *before* calculating the strut size. This improves spacing below tabular environments etc., probably.

The meanings of the arguments to \@setsize appear to be (whatever these may signify):

### **Syntax:**

```
\ensuremath{\mbox{\tt Qsetsize}} {\langle \textit{current size} \rangle} {\langle \textit{font baselineskip} \rangle} {\langle \textit{ignored (!)} \rangle} {\langle \textit{font size} \rangle}
```

Note that \@setsize (in modern LATeX, \@setfontsize, which is called by \@setsize) seems to be the only place in purely modern LaTeX where \@currsize is set, and \lambda txguide.cls seems to be the only file in the LaTeX base distribution that uses it.

```
179 \def\@setsize#1#2#3#4{%
180
     \@nomath#1%
     \let\@currsize#1%
181
     \baselineskip #2%
182
     \baselineskip=\baselinestretch\baselineskip
183
     \parskip=\baselinestretch\parskip
184
     \setbox\strutbox \hbox{%
185
       \vrule height.7\baselineskip
186
               depth.3\baselineskip
187
               width\z@}%
188
189
     \skip\footins=\baselinestretch\skip\footins
     \normalbaselineskip\baselineskip#3#4}
190
```

Fix up spacing before and after displayed math (arraystretch seems to do a fine job for inside LaTeX displayed math, since array and eqnarray seem to be affected as expected).

```
191 \everydisplay\expandafter{%
192 \the\everydisplay
193 \abovedisplayskip \displayskipstretch\abovedisplayskip
194 \belowdisplayskip \displayskipstretch\belowdisplayskip
195 \abovedisplayshortskip \displayskipstretch\abovedisplayshortskip
196 \belowdisplayshortskip \displayskipstretch\belowdisplayshortskip
197 }
```

## 17.9 Document markup

#### 17.9.1 Declaring issue data

The following macros save their argument(s) to internal variables for later usage:

\journalname

The journal name.

- 198 \def\journalname#1{\@bsphack\def\@journalname{#1}\@esphack}%
- 199 \journalname{Enterprise Modelling and Information Systems Architectures}%

\issn The International Standard Serial Number (ISSN) is the standardized international code which allows the identification of any serial publication, including electronic serials, independently of its country of publication, of its language or alphabet, of its frequency, medium, etc.; see the ISSN web site.

Here we have two of them, one for print and one for online issues.

\volume Volume number.

204 \volume{\textcolor{red}{0}}%

\issue Issue number and date.

```
205 \def\issue#1#2{\@bsphack
```

206 \def\@issue{#1}%

207 \def\@issuedate{#2}%

208 \@esphack}%

209 \issue{\textcolor{red}{0}}{\textcolor{red}{month 0000}}%

\specialissuetitle\*
\specialissuetitleprefix

\specialissuetitle If the current issue is a *special issue*, the respective title goes here.

```
210 \def\specialissuetitle{\@ifstar\@sspit\@spit}%
211 \newcommand{\@spit}[2][]{%

233 \def\copyrightyear#1{\@bsphack\def\@copyrightyear{#1}\@esphack}%
234 \copyrightyear{\the\year}%
```

\title \subtitle

\author

Title, subtitle, and author information for the current article.

236 \copyrightholder{\textcolor{red}{\copyright{}holder}}%

These macros are a bit special as they accept up to *two* optional arguments together with the obligatory one. The optional arguments are for the running-title (*short*) and the table-of-contents (*ToC*) versions, respectively, of the main entry, if there is any:

235 \def\copyrightholder#1{\@bsphack\def\@copyrightholder{#1}\@esphack}%

#### **Syntax:**

If no optional argument is given the obligatory argument will appear in all the respective places.

If one optional argument is given then its' value replaces both the short and the ToC entries.

If *two* optional arguments are given then the value of the first one becomes the *short* headline (et al.) entry, and the second one is reproduced in the table of contents.

If *both* optional arguments are given but the first one is left empty then the *short* entry defaults also to the main value, and only the *ToC* entry is changed.

\outputarticleappendix \@articleappendix \@wrap@articleappendix articleappendix articleappendix\*

438

The articleappendix and articleappendix\* environments collect the material given within them inside an article environment. The collected material is accumulated and output at the article's very end. The basic form articleappendix begins a new page per instance while the starred form articleappendix\* does not. Each appendix is wrapped into its own group so things remain local.

```

## 17.9.2 Page styles

This is the standard page style:

**Page Head:** three lines of text, \textwidth wide and aligned to the inner and outer text body borders, respectively, each above a black horizontal line at full sheet width. The text entries comprise:

Line 1, inner side: journal name;

outer side: no text.

Line 2, inner side: volume/number/issue date, text colour is 50% grey;

outer side: no text.

Line 3, inner side:

▶ left pages: section name;

□ common right pages: author's name(s);

▶ editorial content, both sides: section or category name;

text colour is 50% grey;

outer side: page number in bold type, coloured black, shifted by an amount of \headpageoffset to the outer edge of the page.

**Page foot:** Mostly empty; sometimes in editorial content sections it shows a black horizontal line from the outer text edge to the inner sheet edge (spine).

\headwidth \headmargin Basic lengths for head and foot elements. \headwidth is the overall width of the headbox equalling the page width plus a bleed of three millimeters. It is logically restricted to \textwidth by substracting \headmargin at both sides.

\bleed Bleed is a printing term that refers to printing beyond the edge of the sheet after trimming. The \bleed is a measure describing the (small) amount of space by which objects on the border of your document will extend. Please note that this length is not added automatically, but has to be added manually.

\footrulewidth

The width of the foot rule. As it is drawn asymmetrically (running from the outer text edge to the spine) it has to be a bit smaller than the head box.

\headfootruleheight

This is the width of all lines in head and foot.

- 439 \newlength{\headwidth}%
- 440 \newlength{\bleed}%
- 441 \newlength{\headmargin}%
- 442 \newlength{\footrulewidth}%
- 443 \newlength{\headfootruleheight}%
- 444  $\setlength{\bleed}{3mm}\%$
- 445 \setlength{\headfootruleheight}{0.4mm}%

We want to be able to change \bleed in the preamble so we delay the calculations until \begin{document}.

- 446 \AtBeginDocument{%
- 447 \setlength{\headwidth}{\paperwidth+2\bleed}%
- 448 \setlength{\headmargin}{0.5\headwidth-0.5\textwidth}%
- 449 \setlength{\footrulewidth}{0.5\headwidth+0.5\textwidth}}%

```
The main formatting routine for the running head is a tabular* environment.

\sigmobispage This macro holds the complete announcement page on the *GI-SIG-MoBIS portal* to be published on the third cover page (backcover, inside).

\sigmobispage holds just the contents of the SIG-Mobis ad. It produces a box with an outer width of *zero points* and a height as specified by the inner minipage environment. When used as an advertising page it has to be *centered horizontally and vertically* in the page area. This is achieved most easily by using the \AtPageDeadCenter utility macro (see section 17.9.3) from eso-pic [?].

```

584
585
         The GI-SIG-MoBIS portal provides numerous resources on enterprise
586
         modelling research, such as a full-text digital library, a
587
         bibliography, conference announcements, a glossary and evaluation
588
         reports. It is intended to establish the premier forum for an
589
         international community in enterprise modelling. The new version
590
         is based on a Content Management System allowing authorized users
591
         to conveniently upload content. A \BibTeX{} interface allows for
592
593
         conveniently integrating bibliographic data. Information about
```

```
and full-text access to articles (for GI-SIG-MobIS members only)
                     595
                               are also available on the~portal.

\graphicspath

The picture files used above have to be found. Normally they should be somewhere on the TEX \$PATH, probably in the same directory where EMISA is situated. As least as we are in Beta state one might put them into the local subdirectory <code>figs\_base/</code>; we provide for that by including the following line in the config file.

```
675 \graphicspath{{/figs_base/},{./figs_base/}}
```

## 17.9.4 Formatting common articles

\c@article The article and editorialcontent environments maintain their own (common) counter. Although it is not referenced anywhere at the moment of writing it is used to reset a couple of other counters with every new one of those environments.

```
676 \newcounter{article}%
677 \@addtoreset{section}{article}%
678 \@addtoreset{footnote}{article}%
679 \@addtoreset{figure}{article}%
680 \@addtoreset{table}{article}%
```

article This encapsulates each article.

```
681 \newenvironment{article}[1]{%
682    \clearpage
683    \refstepcounter{article}%
684    \pagestyle{emisaarticle}%
685    \col@number=\tw@\relax
686    #1\relax
687    \l@article
```

Every article is its own bibliographical unit.

```
\begin{refsection}%

                     The journal \emph{\@journalname} is the official journal of the
                752
                     Special Interest Group on Modelling Business Information Systems
                753
                754
                     within the German Informatics Society (GI-SIG MoBIS).
                755
                     The journal Enterprise Modelling and Information Systems
                756
                     Architectures is intended to provide a forum for those who prefer a
                757
                     design-oriented approach. As the official journal of the German
                758
                     Informatics Society (GI-SIG-MoBIS), it is dedicated to promote the
                759
                     study and application of languages and methods for enterprise
                760
                     modelling -- bridging the gap between theoretical foundations and
                761
                     real world requirements. The journal is not only aimed at
                762
                763
                     researchers and students in Information Systems and Computer
                     Science, but also at information systems professionals in industry,
                764
                     commerce and public administration who are interested in innovative
                765
                     and inspiring concepts.
                766
                767
                     The journal's editorial board consists of scholars and practitioners
                768
                     who are renowned experts on various aspects of developing, analysing
                769
                     and deploying enterprise models. Besides Information Systems, they
                770
                     cover various fields of Computer Science.
                771
                772

```

\editorialboard Outputs the Editorial Board page.

\editorialboardname Sets the name of the Editorial Board for use in the table of contents and in \editorialboard.

\editorialboardbody Sets the contents of the Editorial Board for use in \editorialboard.

The vertical size of the Editorial Board will exceed page height if there are more than about 48 name entries and/or other material. To prevent that the grey box is scaled down to a height of \editorialboxmaxheight if its natural size is bigger than that.

   \guidelinesbody{%
     The journal serves to publish results of innovative research on all
879
     facets of creating and analysing enterprise models and information
880
     systems architectures. For research papers, it is required to
881
     satisfy academic standards in terms of originality, level of
882
     abstraction and justification of results. Experience reports serve
883
     to describe and analyse success stories as well as practical
884
     obstacles and resulting research challenges. Topics covered by the
885
     journal include, but are not restricted to the following subjects:
886
     \begin{itemize}
887
       \item Languages and Methods for Enterprise Modelling
888
              Reusable Domain Models (Reference Models)
889
       \item Analysis and Design Patterns
890
       \item Modelling of Business Processes and Workflows
       \item Process-Oriented System Architectures
892
       \item Component-Oriented System Architectures
893
       \item Conceptual Modelling for Component-Oriented Design
894
       \item Ontologies for Enterprise Modelling
895
       \item Modelling for Enterprise Application Integration
896
       \item Modelling for Data Warehouses
897
       \item Modelling to support Knowledge Management
898
       \item Model-Driven Development
899
       \item Aspect-Oriented Design
       \item Agile Methods for Enterprise Modelling
901
     \end{itemize}
902
     Authors are asked for electronic submissions, which have to be sent
903
     to the editor in chief as e-mail attachment. In case of multiple
904
     authors, it is required to name one author who acts as contact
905
     person. The submission should include a cover page with the paper's
906
907
     title and the names, affiliations and e-mail addresses of all
     authors. The first page of the paper starts with the title and does
908
     not carry the authors' names. A manuscript must be either in MS
     Word or PDF format. It should not exceed 5.000 words -- this
910
     includes an abstract of around 150 words.
911
912
     Submitted papers will be reviewed within no more than two months.
913
     The review process is double blind. Authors who submit a manuscript
914
```

guarantee that it has not been published elsewhere, nor is intended 915

to be published elsewhere. Papers that were accepted for

publication must be written according to the style defined for the 917

journal. A comprehensive description as well as a corresponding 918

Word template is provided on the web portal of the GI-SIG-MobIS 919

#### 17.9.7 Making the title

\maketitle This takes a couple of prerequisites, then looks if we are in one- or twocolumn mode and finally outputs the information accordingly.

### 17.9.8 Sectioning

\fi

1010

\@sect This internal macro facilitates the representation of unstarred sectioning commands using \@startsection.

# Syntax:

Here is the meaning of all these parameters:

(*name*) The name of the current sectioning level, e.g., «subsection».

 $\langle level \rangle$  The level number, describing the hierarchical depth of the current sectioning level named in – e.g., chapter = 1, section = 2, etc. This is used namely in the tabel of contents.

(*indent*) The indentation of the heading, relative to the left margin. Positive values shift the heading to the right («inward»), negative values to the left («outward»).

**(beforeskip)** The absolute value represents the space to leave above the heading. If the value is negative, the first paragraph indent following the heading is suppressed.

- (afterskip) If positive, then the section heading is typeset on its own line and the value determines the amount of vertical space to leave below the heading. If negative, then the section heading is typeset run-in and the absolute value determines the amount of horizontal space to leave between the heading and the following text.
- $\langle style \rangle$  Commands to set the output style. Since he June 1996 release of LaTeX  $2_{\mathcal{E}}$  the *last* command in this argument may be a command such as \MakeUppercase or \fbox that takes an argument. The section heading will be supplied as the argument to this command. So setting this to, say,  $\langle bfseries \rangle$ MakeUppercase» would produce bold, uppercase headings.

 $\langle toc\text{-heading} \rangle$  The optional string to be output in the table of contents (toc). If not given, the value from  $\langle heading \rangle$  is used.

(*heading*) The heading text to be output in the text body.

These parameters are used also in more high-level sectioning macros upto the familiar user level commands defined below.

```
1038 \def\@sect#1#2#3#4#5#6[#7]#8{%
1039 \ifnum #2>\c@secnumdepth
1040 \let\@svsec\@empty
1041 \else
1042 \refstepcounter{#1}%
```

Since \@seccntformat might end with an improper \hskip which is scanning forward for plus or minus we end the definition of \@svsec with \relax as a precaution.

If afterskip is positive, then its value denotes the amount of vertical skip to leave below the heading:

```
\begingroup
1047
           #6{\noindent%
1048
              \@hangfrom{\hskip #3\relax\@svsec}%
1049
               \raggedright
1050
               \interlinepenalty\@M
1051
1052
               \strut#8\strut
               \@@par}%
1053
1054
        \endgroup
1055
        \csname #1mark\endcsname{#7}%
1056
         \addcontentsline{toc}{#1}{%
           \ifnum #2>\c@secnumdepth \else
1057
             \protect\numberline{\csname the#1\endcsname}%
1058
           \fi
1059
           #7}%
1060
      \else
```

If afterskip is negative, the its absolute value indicates the amount of horizontal skip to leave to the right of the run-in heading.

```
1062 \def\@svsechd{%
1063 #6{\hskip #3\relax
```

```
1064
           \@svsec #8}%
1065
           \csname #1mark\endcsname{#7}%
           \addcontentsline{toc}{#1}{%
1066
             \ifnum #2>\c@secnumdepth \else
1067
               \protect\numberline{\csname the#1\endcsname}%
1068
             \fi
1069
             #7}}%
1070
      \fi
1071
      \@xsect{#5}}
1072
```

\@ssect The mechanism is very similar for *starred* sectioning commands, but there are few parameters.

### **Syntax:**

```
\ensuremath{\mbox{@ssect}\{\mbox{$\#1$: indent}\}}{\mbox{$\{\mbox{$\#2$: beforeskip}\}}}{\mbox{$\{\mbox{$\#3$: afterskip}\}}}
  \{\langle #4: style \rangle\} \{\langle #5: heading \rangle\}
See also the list on p. 38.
1073 \def\@ssect#1#2#3#4#5{%
1074
        \@tempskipa #3\relax
        \ifdim \@tempskipa>\z@

                \parbox[t]{\linewidth}{%
 1080
                   \raggedright\interlinepenalty\@M#5\strut}\@@par}%
1081
           \endgroup
1082
        \else
1083
           \def\@svsechd{#4{\hskip #1\relax #5}}%
1084
        \fi
 1085
1086
        \@xsect{#3}}
This formats the counters (including any whitespace) of sectioning headers.
      \def\@seccntformat#1{%
        \csname the#1\endcsname%
1088
        \relax\ \ }%
```

\section These are the sectioning commands, all being built on top of \@startsection.

#### **Syntax:**

\@seccntformat

See also the list on p. 38.

All the user level sectioning commands are defined using \@startsection.

Normally the corresponding section level counter is incremented and printed out; the exact output is determined by the definition of the corresponding \the... macro. Additionally, the command uses the counter secnumdepth to determine the highest section level to be numbered at all. If an asterisk (\*)

follows the command, then the corresponding section level counter is *not* used and *no* [ $\langle altheading \rangle$ ] argument is allowed.

```

## 17.10 Bibliographies

The infrastructure for that is already present in LaTeX [?, ltbibl.dtx] so we have to tinker with just a couple of things.

\bibliography

bibliatex defines this macro in a way that it prescribes the bibliography data base(s) globally for the whole of the document. As we need a means to use different bibliography data bases with different articles, we redefine \bibliography such that it (1) works globally (biblatex style), when used in the preamble; (2) works locally in the document body (as defined here); and (3) appends locally to any globally given bibliography data base(s).

Point 1 is met simply by postponing the redefinition until \begin{document}. That way we have the unchanged behaviour in the preamble and the new one after that.

Points 2 and 3 lead to redefining this macro the same way as it was (in principle; see the original definition in *biblatex.sty*) but limited to a local scope.

```
1160 \def\@tempa#1\do\addbibresource#2\nil{%
       \ifx\relax#2\relax
1161
       \else
1162
       1163
       \expandafter\@tempa\@preamblecmds\nil
1164
1165
1166 }
   \expandafter\@tempa\@preamblecmds\do\addbibresource\nil
1167
   \AfterEndPreamble{%
      \DeclareRobustCommand{\bibliography}[1]{%
1169
         \addbibresource{#1}}%
1170
1171 }%
1172 \tolerance 1414
1173 \hbadness 1414
1174 \emergencystretch 1.5em
1175 \hfuzz 0.3pt
1176 \widowpenalty=10000
1177 \displaywidowpenalty=10000
1178 \clubpenalty=5000
1179 \interfootnotelinepenalty=9999
1180 \brokenpenalty=2000
1181 \vfuzz \hfuzz
```

Here, the generation of the main class module is paused by the first tag (there are more pieces below); instead, generating a few biblatex-related code files starts with the second tag.

```
1182 \( /class \)
1183 \( *biblatex \)
```

# 17.10.1 The EMISA bibliography style

A bibliatex *bibliography style* is a set of macros used to output the entries in the bibliography. Bibliography styles are defined in files with the suffix *bbx*. The selected one is loaded at the end of the biblatex package.

Here we produce the EMISA bibliography style by the not so very surprising name *emisa.bbx*. This file will be generated on installation from the following code lines between the <\*bbx> and </bbx> meta-tags.

```
1184 (*bbx)
```

We start by declaring the file name and date.

```
1185 \ProvidesFile{emisa.bbx}[2012/12/21 0.4 EMISA bibliography style]
```

The EMISA bibliography style is built on top of the standard style *authoryear.bbx* being loaded here

```
1186 \RequireBibliographyStyle{authoryear}
... to be expanded and modified in the following.
```

\bibitemlabel

The macro \bibitemlabel represents the formatting of the \bibitem labels.

```
1187 \newcommand*{\bibitemlabel}[1]{%
1188 \normalfont #1}
```

thebibliography

The implementation of the thebibliography environment typically makes use of the generic list environment. First a few length registers needed internally are adjusted. Note the infix notation used in some declarations facilitated by the calc package.

```
1189 \defbibenvironment{bibliography}
1190 {\list{}%
1191 {\setlength{\labelwidth}{\z@}%
1192 \setlength{\leftmargin}{\z@}%
1193 \setlength{\itemindent}{-\leftmargin}%
1194 \setlength{\itemsep}{.5\baselineskip\@plus.2\baselineskip\@minus.2\baselineskip}%
1195 \setlength{\parsep}{\bibparsep}%
```

In the bibliography listings we want the name lists not to be abbreviated. Well, a name list containing more than 999 names *will* be abbreviated nevertheless; but then, having a name list *this* long might be a problem in itsself.

```
1196 }%
1197 \let\makelabel\bibitemlabel
```

Adjusting short lines in small paragraphs can be rather hard, so some tolerance is added here.

```
1198 \tolerance 9999
1199 \emergencystretch 3em
1200 \hfuzz .5\p@
1201 \vfuzz\hfuzz
```

This is setting the normal (non-infinite) value of \clubpenalty for the whole of this environment, so we must reset its stored value also.

```
1202 \clubpenalty 4000
1203 \@clubpenalty\clubpenalty
1204 \widowpenalty 4000
```

This causes a «.» (period) not to produce an end-of-sentence space.

```
1205 \sfcode'\.\@m
```

Inside the bibliography we want no «and» in author lists.

An empty thebibliography environment will cause a warning.

```
1209 \def\@noitemerr{\@latex@warning{Empty 'thebibliography' environment}}%
1210 \endlist}
1211 {\item}
```

Formatting commands: punctuation and spacing, blocks and units The following code is taken from biblatex.def and modified at several places (see comments). These are some basic and/or generic macros and might be superseded afterwards by definitions taken from standard.cbx or authoryear.cbx.

The major segments of a bibliography entry are ,Äòblocks' and ,Äòunits'. A block is the larger segment of the two, a unit is shorter or at most equal in length. For example, the values of fields such as title or note usually form a unit which is separated from subsequent data by a period or a comma. A block may comprise several fields which are treated as separate units, for example publisher, location, and year. An entry is segmented by inserting \newblock and \newunit commands at suitable places and \finentry at the very end. The actual printed output of these is defined in the corresponding \...punct macros.

The following commands add punctuation marks but automatically prevent doubling and remove preceding whitespace. Note that the behavior described below is the package default which is adjustable using \DeclarePunctuationPairs. Just the commands used in EMISA are discussed here.

**\addperiod** adds a period unless it is preceded by an abbreviation dot or any other punctuation mark. This command may also be used to turn a previously inserted abbreviation dot into a period, for example at the end of a sentence.

\addcomma adds a comma unless it is preceded by another comma, a semicolon, a colon, or a period. \addcolon adds a colon unless it is preceded by a comma, a semicolon, another colon, or a period. \isdot turns a previously inserted literal period into an abbreviation dot. In contrast to \adddot, nothing is inserted if this command is not preceded by a period.

The following macros insert space.

**\addspace** adds a breakable interword space.

\addhighpenspace adds a space penalized by the value of the highnamepenalty counter which holds a penalty affecting line-breaking in names; please refer to the biblatex manual for explanation. The counter is initialized to \hyphenpenalty at load-time. Higher values lower the number of linebreaks and vice versa. The traditional BibTeXbehavior (no linebreaks at highnamepenalty breakpoints) is reached by setting it to ,Äòinfinite' (≥ 10000).

**\addlowpenspace** adds a space penalized by the value of the lownamepenalty counter, similar to highnamepenalty. The counter is initialized to 0.5 \hyphenpenalty at load-time.

\newunitpunct The separator inserted between "'units"' in the sense explained above. Here, the definition is just a space.

```
1212 \renewcommand*{\newunitpunct}{\space}
```

\finentrypunct This inserts the punctuation printed at the very end of every bibliography entry. Here it is simply nothing.

```
1213 \renewcommand*{\finentrypunct}{\relax}
```

\bibsetup is a generic hook controlling the (low-level) layout of the bibliography and the list of shorthands. The default definition should work fine in most cases.

```
1214 \renewcommand*{\bibsetup}{%
1215 \interlinepenalty=5000\relax
1216 \widowpenalty=10000\relax
1217 \clubpenalty=10000\relax
1218 \biburlsetup
1219 \flushbottom
1220 \frenchspacing
1221 \sloppy}
```

The penalties above are not specific to biblatex but low-level TeX features.

- > \clubpenalty is an additional penalty assigned to page breaks after the first line of a paragraph;
- ▷ \widowpenalty is an additional penalty assigned to page breaks before the last line of a paragraph.

Note that the value 10000 means «infinite» as far as TeX is concerned. Setting some penalty to 10000 will unconditionally suppress the respective breakpoint.

The net effect of the above settings is as follows. Breaking a bibliography entry across pages is discouraged, but not suppressed altogether. If a bibliography entry spans less than four lines, TeX will always keep it on one page. If it spans four or more lines, it may be broken across pages, provided that there are at least two lines on the page before and after the break.

These penalties should normally be used in conjunction with \raggedbottom. If you don't like that and remove \raggedbottom from the definition of \bibsetup, make sure to provide some stretchability between bibliography entries by setting \bibitemsep to a suitable value, e.g.:

```
\setlength{\bibitemsep}{0.5\baselineskip plus 0.5\baselineskip}
```

\biburlsetup This is some local setup in order to use \url properly.

To ease the job of folding long URLs into narrow columns the following code allows linebreaks after numbers as a last resort. The macro also allows breaks after hyphens and adjusts \Urlmuskip to add some stretchability to URL strings.

```
1222 \renewcommand*{\biburlsetup}{%
                    \Urlmuskip=0mu plus 2mu\relax
 1223
                    \mathchardef\UrlBreakPenalty=200\relax
 1224
                    \mathchardef\UrlBigBreakPenalty=100\relax
 1225
                    \mathchardef\UrlEmergencyPenalty=9000\relax
 1226
                    \appto\UrlSpecials{%
 1227
                         \do\0{\mathchar'\0\penalty\UrlEmergencyPenalty}%
                         \do\1{\mathchar'\1\penalty\UrlEmergencyPenalty}%
 1229
                          \do\2{\mathchar'\2\penalty\UrlEmergencyPenalty}%
 1230
                         \do\3{\mathchar'\3\penalty\UrlEmergencyPenalty}%
 1231
                          \do\4{\mathchar'\4\penalty\UrlEmergencyPenalty}%
 1232
                          \do\5{\mathchar'\5\penalty\UrlEmergencyPenalty}%
 1233
                         \do\6{\mathchar'\6\penalty\UrlEmergencyPenalty}%
 1234
                          \do\7{\mathchar'\7\penalty\UrlEmergencyPenalty}%

**Miscellaneous field formatting directives** This subsection introduces biblatex commands and utility macros used to define the formatting directives required by the data commands, see p. ??.

The following list shows a few frequently used ones; those more rarely used are described below.

**\DeclareFieldFormat**[ $\langle entry type \rangle$ ]{ $\langle format \rangle$ }{ $\langle code \rangle$ } defines the formatting code given in  $\langle code \rangle$  to be executed by \printfield on processing the field  $\langle format \rangle$ . The value of the field will be passed to  $\langle code \rangle$  as its first and only argument. If an  $\langle entry type \rangle$  is specified, the format is specific to that type; otherwise it applies to all entry types defined. The name of the field currently being processed is available in \currentfield.

\DeclareFieldAlias[\langle entry type \rangle] \{\langle alias \rangle} \[ \langle format \entry type \rangle ] \{\langle format \rangle \} \] declares \( \langle alias \rangle \) to be an alias of the field format \( \langle format \rangle \). If an \( \langle entry type \rangle \) is specified, the alias is specific to that type. The \( \langle format \entry type \rangle \) is the entry type of the backend format. This is only required when declaring an alias of a type specific formatting directive.

**\bibstring[\langle wrapper \rangle] {\langle key \rangle}** prints the bibliography string identified by  $\langle key \rangle$ . The string will be capitalized as required. Depending on the abbreviate package option, \bibstring prints the short or the long version of the string. If bibliography strings are nested, i. e., if \bibstring is used in another string, it will behave like \bibxstring. If the  $\langle wrapper \rangle$  argument is given, the string is passed to the  $\langle wrapper \rangle$  for formatting. This is intended for font commands such as \emph.

**\bibcpstring[** $\langle wrapper \rangle$ ] { $\langle key \rangle$ } Similar to \bibstring but the string is always capitalized.

**\bibxstring**{ $\langle key \rangle$ } is a simplified but expandable version of \bibstring. Note that this variant does not capitalize automatically, nor does it hook into the punctuation tracker. It is intended for special cases in which strings are nested or an expanded bibliography string is required in a test.

The citetitle format is used to output the title field in citations.

```
1244 \DeclareFieldFormat{citetitle}{#1}
1245 \DeclareFieldFormat[article]{citetitle}{#1\isdot}
1246 \DeclareFieldFormat[inbook]{citetitle}{#1\isdot}
1247 \DeclareFieldFormat[incollection]{citetitle}{#1\isdot}
1248 \DeclareFieldFormat[inproceedings]{citetitle}{#1\isdot}
1249 \DeclareFieldFormat[patent]{citetitle}{#1\isdot}
1250 \DeclareFieldFormat[thesis]{citetitle}{#1\isdot}
1251 \DeclareFieldFormat[unpublished]{citetitle}{#1\isdot}
```

The following field formats are used for output in bibliographies.

```
1252 \DeclareFieldFormat{booktitle}{#1\isdot}
1253 \DeclareFieldFormat{journaltitle}{#1}
1254 \DeclareFieldFormat{issuetitle}{#1}
    \DeclareFieldFormat{maintitle}{#1}
    \DeclareFieldFormat{title}{#1}
    \DeclareFieldFormat[article]{title}{#1\isdot}
   \DeclareFieldFormat[inbook]{title}{#1\isdot}
    \DeclareFieldFormat[incollection]{title}{#1\isdot}
    \DeclareFieldFormat[inproceedings]{title}{#1\isdot}
    \DeclareFieldFormat[patent]{title}{#1\isdot}
1261
    \DeclareFieldFormat[thesis]{title}{#1\isdot}
1263 \DeclareFieldFormat[unpublished]{title}{#1\isdot}
    \DeclareFieldFormat{url}{\url{#1}}
    \DeclareFieldFormat{urldate}{\bibstring{urlseen}\addcolon\space#1}
    \DeclareFieldAlias[misc]{note}{urldate}
1267 \DeclareFieldAlias[report]{note}{urldate}
1268 \DeclareFieldAlias[thesis]{note}{urldate}
1269 \DeclareFieldFormat{version}{\bibcpstring{version}~#1}
1270 \DeclareFieldFormat{volume}{\bibcpstring{volume}~#1}
1271 \DeclareFieldFormat{volumes}{#1~\bibcpstring{volumes}}
```

**Formatting names and name lists** The following code morsels are taken from *biblatex.def* and modified.

The section employs special biblatex commands to (re)define or use macros in bibliography and citation styles.

- $\mbox{\ensuremath{\mbox{newbibmacro}\{\langle name\rangle\}[\langle arguments\rangle][\langle optional\rangle]\{\langle definition\rangle\}}\ defines a macro to be ex$ ecuted via \usebibmacro later. The syntax and argument handling of this command is very similar to \newcommand except that
  - $\triangleright \langle name \rangle$  may contain characters such as numbers and punctuation marks but no backslash, and
  - > \newbibmacro issues just a warning message if the macro is already defined, then falls back to \renewbibmacro.

\renewbibmacro{\(\lamble\) | \(\lambda\) | \ but redefines  $\langle name \rangle$ . If the macro is undefined, \renewbibmacro issues a warning message and falls back to \newbibmacro.

 $\uberright \mathbf{name}$  executes the biblatex macro  $\langle name \rangle$ , as defined with  $\uberright \mathbf{newbibmacro}$ . If the macro takes any arguments, they are simply appended after  $\langle name \rangle$ . \usebibmacro is robust.

All the formatting directives for name lists get the following «arguments»:

```
#1 = last name
#2 = last name (initials)
#3 = first name
#4 = first name (initials)
#5 = name prefix, a.k.a. 'von part'
#6 = name prefix (initials)
#7 = name affix, a.k.a. 'junior part'
#8 = name affix (initials)
This declares the output format of name lists to be used by \printnames.
1272 \DeclareNameFormat{emisa:names}{%
```

```
\usebibmacro{name:last-firstinit}{#1}{#4}{#5}{#7}%
1273
      \usebibmacro{name:andothers}}
1274
```

This bibmacro formats the names of authors, editors or translators.

```
me:last-firstinit
```

```
bibmacro
```

```
1275 \newbibmacro*{name:last-firstinit}[4]{%
       \usebibmacro{name:delim}{#2#3#1}%
1276
       \usebibmacro{name:hook}{#2#3#1}%
1277
Formatting: name prefix ('von part'), ...
       \ifblank{#3}{}{%
1278
         \mkbibnameprefix{#3}%\isdot
1279
         \ifpunctmark{'}
1280
1281
           {}
           {\ifuseprefix{\addhighpenspace}{\addlowpenspace}}}%
1282
... last name ...
       \mkbibnamelast{#1}\addhighpenspace
1283
... name affix ('junior part'), ...
       \ifblank{#4}{}{\addlowpenspace\mkbibnameaffix{#4}\addlowpenspace}%
```

```
... and first name (initials).
                                \ifblank{#2}{}{\mkbibnamefirst{#2}\isdot}%
                          1286 }%
                         This outputs the «in:» tag, as in bibliography entries for proceedings, collections, edited books and so
         in: bibmacro
                         on.
                          1287 \renewbibmacro*{in:}{%
                                \printtext{%
                          1288
                                  \bibcpstring{in}%
                          1289
                                  \intitlepunct}}
                          1290
                         Generic bibliography macros  
In this subsection the generic bibmacros outputting the typical name
                         fields in bibliographies are customised.
       author bibmacro

```

#### 17.10.2 The EMISA citation style

A citation style is a set of commands such as \ite which print different types of citations. Such styles are defined in files with the suffix *cbx*. The biblatex package loads the selected citation style file at the end of the package. Note that a small repertory of frequently used macros shared by several of the standard citation styles is also included in biblatex.def. This file is loaded at the end of the package as well, prior to the selected citation style.

The EMISA citation style is defined in the file *emisa.cbx* which is generated from the following code lines between the <\*cbx> and </cbx> meta-tags.

```
2064 \( \*cbx \)
2065 \ProvidesFile{emisa.cbx}[2010/09/24 0.3 EMISA citation style]
2066 \RequireCitationStyle{authoryear-comp}
2067 \renewcommand*{\nameyeardelim}{\addspace}
```

\DeclareRangeChars configures the \ifnumerals and \ifpages tests. The setup will also affect \iffieldnums and \iffieldpages as well as \mkpageprefix and \mkpagetotal. The argument is an undelimited list of characters which are to be considered as range indicators. The regular version of this command replaces the current setting, the starred version appends its argument to the current list. The default setting is {~,;-+/}, so strings like "3-5", "35+", "8/9" and so on will be considered as a range.

```
Here we add the character f to enable ranges like "123f" and "456ff".

2068 \DeclareRangeChars*{f}

Here, the EMISA citation style file emisa.cbx ends.

2069 \langle \cdot cbx \rangle
2070 \langle \dot biblatex \rangle
2071 \langle \sclass \rangle

Here, the LATEX class EMISA ends.
```

# 17.11 Examples and templates

## 17.11.1 Document templates

**2072** (/class)

Here we add a couple of small document templates to ease the creation of documents: emisa-article-template.tex for article authors and emisa-issue-template.tex for copy editors. Both are generated from the following piece.

```
2073 (*template)
2074 (*article)
2075 \documentclass[]{emisa}
2076 %% You can use this additional option (e.g., "[english, draft]"):
2077 %% draft -- this marks overfull lines
2078 (/article)
2079 (issue)\documentclass[final,cover]{emisa}
2080 (*article | issue)
2081 %% The following package imports are recommended, but not obligatory;
2082 %% you might want take a look into their respective manuals if you
2083 %% don't know what they do.
2084 \usepackage{amsmath,amssymb,mathtools}
2085 %% Additional package imports go here:
2086 (/article | issue)
2087 (*issue)
2088 %% Insert here issue data:
2089 \volume{}% Volume No.
2090 \issue{}{}% Issue No. and Issue Date
2091 %% If there are any bibliography data bases to be used globally
2092 %% please indicate here:
2093 \bibliography{}
2094 %% Insert here any (relative or absolute) path to be searched for
```

```
2095 %% graphics files:
2096 \graphicspath{{./figs_base/},{}}
2097 %% Here you can alter the cover pages; e.g. this:
2098 %% \coverII{\AtPageDeadCenter{Something}}
2099 %% typesets the word "Something" centered on the inner side of the
2100 %% front sheet.
2101 %% You can also delete any cover pages at all by defining them empty,
2102 %% see below:
2103 \coverII{}
2104 %% This outputs the SIG-MOBIS page on the inner side of the back
2105 %% sheet:
2106 \coverIII{\AtPageCenter{\sigmobispage}}
2107 (/issue)
2108 (*article | issue)
2109 %% Here, the normal text begins.
2110 \begin{document}
2111 (/article | issue)
2112 (*issue)
2113 \tableofcontents
2114
2115 \begin{editorial}
2116 %% Please insert editorial text here.
2117
2118 \end{editorial}
2119 (/issue)
2120 (*article | issue)
2121 \begin{article}{%
2122 %% Please declare the title elements of your article here. Unused
2123 %% elements can either be deleted or commented out, or else just let
2124 %% empty. In either case they are not typeset.
2125 %% If the option referee or review is given, all author tags, address,
2126 %% email and acknowledgements will be likewise omitted.
      \title{}
